DHARMA PUBLISHING
Dedicated to all beings swept by the tide of conflicting emotions, that through a clear understanding of the workings of the mind, they may attain liberation.
Foreword

Ten years ago, Tibetan Buddhism and its psychology was not very well known in the West. But with the translation of texts such as this, the practical psychological teachings of Buddhism are now beginning to materialize.

The subject of this book is self-knowledge. That is, until we thoroughly examine the nature of our mind, we cannot really be aware of who we are or why we are here. Just as an intoxicated man, lost in his own mind-created distortions, is unable to judge or control his actions, without an awakening into true knowledge we can only continue to create problems for ourselves and others.

The complexities of our mental patterns and the turbulence of upsetting emotions join like earth and water to create a kind of mud which we call 'samsaric mind'. Until we can cleanse ourselves of inner confusion and penetrate the various 'layers' of this mind, our judgments and actions will only reflect our inherent restlessness, like bees trapped in a jar. We can see them moving around in certain patterns, but without understanding their situation they can only move in Samsaric realms-each with its own unique loss of freedom. On the other hand, by properly investigating our immediate situation, we can learn how an integrated patterning of mind can totally free us from our self-imposed restrictions.

The Abhidharma systematizes Buddha's teachings and is one of the best ways we have of knowing ourselves. As a science of mind, the Abhidharma is such a vast subject that one could spend a lifetime studying the tradition of just one school. This text in particular, through its analysis of the mind and its mental events, is a useful beginning.

A person without understanding is like someone with no tongue who is unable to distinguish the hitter from the
sweet. Similarly, when the various `tastes' of sensations, feelings, perceptions and cognitions become muddled, we lose our ability to discriminate true knowledge from opinions and mere speculation. Often we just accept anything that comes in the door and calls itself knowledge. But if this text is to be useful, it should be examined carefully and critically.

We wish to thank Dr. Guenther and Rev. Kawamura for working so diligently on this translation, and everyone at Dharuma Press who helped to produce it. Through future efforts, we hope to publish much more material on the Abhidharmam, such as Mi-pham's Inkhas-'jug, so that the vast and practical psychology of Buddhism will be available to the West.

Asailga and Vasubandhu, the two brothers, are seated together with Asanga's teacher, Maitreya, above. Asafiga is depicted receiving knowledge by inspiration; Vasubandhu holds it sacred text, indicating his vast scholarship and knowledge of the Alhidharma. The text of Asaiiga, ningon-pa kun-las btus-pa (Al hidhanuasaniuccuva), is an abridgement of the first two chapters of his ' ogacarvabhumi, which employs the Hinayana Abhidharma teachings in the Great Way of the \1ah Vasubandhu's great treatise, the nml;on-pa nuL:.od (Abhi(Ifiarmakosa) revived the Abhidharma teaching which had been lost in it fire at Vikramasila nionasterv. Both brothers started out on their individual paths, but Vasubandhu was later much influenced by his older brother, Asaiiga.

Page xiv

Lord Buddha, the Light of the World from whom all teachings originate, is shown upon the traditional teaching throne with symbols of the six perfections which in him have flowered.

Page xix

dPal-sprul O-rgvan 'Jigs-med 'chos-kvi dhang-po, one of the most renowned Nvingnia lamas of the nineteenth century, is shown here upon it teaching throne. Ile represents the refinement and return to basic principles of study and practice which characterized this dynamic period of synthesis and tolerance.
Mai jursn, the Bodhisattva of discriminating awareness, is the inspiration for true understanding. He holds the flaming sword of discrimination in his right hand and the hook of knowledge in his left.

Nagarjuna, the famous dialectician and father of \lahavana philosophy, who lived around 150 n., is shown displaying the l)harniachakra mudra, symbolic of turning the Wheel of the l)harma. His rin-then 'phreng-bu (Ratnamala) and bshc's-sbring (Suhrilckha), which are often quoted in this text, were letters of advice written to his king of this period.

Santideva, a great pandit of Nalanda University, brilliantly proclaimed the Bodhisattva ideal of Mahayana in his shyocl-,jttg (Bodhicaryavatara) and b.slab httn.ti (Siksasantuccava). Ills works have continued to be studied by all schools in Tibet since the tenth century.

Aryadeva, the illustrious disciple of Nagarjuna, is shown with his defeated opponent at his feet. A master of philosophy and science, his works include the Catuhsataka.

Tsong-kha-pa, the founder of the Gelugpa sect in Tibet, is depicted upon an elephant, indicating he is an incarnation of Manjusri. Ills lam-rim eltcn-inn has been used in Tibet for centuries as a basic text for providing it foundation in Buddhist scholarship.
Preface

'The Necklace of Clear Understanding: An Elucidation of the Working of Mind and Mental Events' by Ye-shes rgvalntshang (171:3-179:3) is an autocommentary on his own verse text, which explains the mind and its fifty-one mental events in 177 four-lined stanzas.

III the colophon to his 'Necklace', Ye-shes rgval-ntshang states that he stayed at the bKra-shin hsam-gtangling nuasterv on the border of Nepal and Tibet, and that he was the disciple of Blo-bzang-bzang-po, of Blo-bzang-ve-sties-dpal- bzang-po (166:3-17:37), the second Panchen Lama, and of Blobzang-rnan-rval. That he belongs to the dGe-lugs-pa school is evident from his title [tongs-dzin] and from the fact that he copiously quotes from Tsong-kha-pa's (1:357-1419) works and standard Indian 'ogacara sources. In fact he builds his presentation around Asailga's :~hhitllunnutsutt►ttt tw►~u (51 mental events as against the Ahhidharnuikosa's 46 mental events) and Tsong-kha-pa's lain-rim Then-mo. In his own words,

I, Ye-shes rgyal-nrtshan ... composed this work ... by making the Ahhidhaniu~samuccaya the basis and by embellishing it with statements from Tsong-kha-pa and his disciples.... [Fol. 511

In this way, he offers the reader what may be called the officially approved version of Buddhist ideas that have come from India'. On the other hand, for what can be done with these ideas practically, we have to look to other sources, above all the rNying-ma-pa tradition which we have utilized in the introduction and in our notes. Nevertheless, from Ye-shes rgvalntshang's account, we can learn that positive mental attitudes produce positive situations for man's growth, while negative ones have the opposite effect. Another important observation is that any emotion affects the whole mind. For example, in a state of
anger which is a negative state, there cannot be present a positive state such as confidence or tension release. The only way to overcome negative states or events is to strengthen the positive ones. To give an example, when assiduousness and confidence are present, there is no room for arrogance or skepticism; while negative emotions merely reinforce negative attitudes, positive emotions lead to growth and health.'

The 'Necklace of Clear Understanding' belongs to that group of literature called Ahhidharma which concentrates on the training of one's critical cognition by methods of proper inspection. The Ahhidharma, in particular as codified in Vasubandhu's Ahl►idbarmakosa and Asanga's Ahhidluirnu►sun~u~ raga, is a systematic approach to understanding the world as man's horizon of meaning. For example, the Ahhidhunnakosa begins with it broad analysis of the psycho-physical constituents, such as the skandhas, dhtu.s, and ni/utunus ((,hap. 1), and then presents the mind and mental events that deal with these topics (Chap. 2) and orders them into the various levels of the mind's world (Chap. 3). This interpretation, as well as construction, is assisted by man's actions (karm(i) (Chap. 4) which are sustained by the emotions operating overtly or covertly (Chap. 5). While all this may involve man in the world and force him to live uncritically, the major task is to grow and, figuratively speaking, rise above the world. It is here that the discussion of the various paths and stages begins (Chap. fi). These stages are intimately connected with the distinct forms of awarenesses (Chap. i) which are further developed and made it firm basis for it meaningful existence of man in his world through contemplative processes (Chap. 8). In all these processes, the mind plays it decisive role.

We wish to acknowledge and express our gratitude to Tarthang Tulku, Head Lama of the Tibetan Nvingnia Meditation Center and the Nvingma Institute in Berkeley, for his avid interest in our work and for his encouragement which spurred its on; to dlr. Leonard van der Kuijp for
proofreading the text; and to llharma Publishing and Dharnita Press for undertaking the publication.
Introduction

The title of this book poses two related questions: Is it justifiable to speak of Buddhist psychology? and, if so, What is the nature of mind in such a framework? The first question can he answered easily in the affirmative since, in many respects, Buddhist ideas are close to contemporary currents in Western psychology which have moved far away from earlier postulational suppositions. Secondly, throughout its history, Buddhism has emphasized experiential knowledge rather than dogmas as the starting point of man's growth and has been less concerned with systems of concepts and sets of postulates which remain hypotheses.to be tested. Consequently, Buddhist psychological methods of observation are concerned with a study of human potentialities as they now exist, as well as how to develop them in the future.

The Way

`The Way' [lane] is a short term for the fact that man controls his future because of his ability to perceive, to know, and to order what he perceives and knows. This ability is dynamically active at this and every other moment, for the mind cannot he a static entity or a mere state or function of consciousness. Rather, it involves questions of When? Where? Under what conditions? From which perspectives? and hence, the mind is an on-going process in a person's life history.

In other words, the central problem of Buddhist psychology is that of personality, which is understood as implying that man has to he true to his inner nature in whichever way it may he defined-after, and not before, integrative techniques have been applied. Such it conception has immediate bearings on the individual's responsibilities which are inextricably tied up with the dimension of `seriousness of living' as contrasted with the
shallowness and superficiality of behavioristic oversimplifications and silly reductions.

The 'way', as understood in Buddhism, is a continual unfolding of man's potential and passes through several stages or phases, each of them involving different references and different self-images. The 'way' begins with the 'accumulation' of all that is necessary for man's intellectual and spiritual growth [tshogs-lam], and then merges into the 'linkage' of what has been learned with further growth [shyor-lam] which, as it were, results in a new vision or fresh perspective, enabling the beholder to see more easily the intrinsic nature of the universe and of himself [mthong-lam]. But this vision has to be kept alive. This is effected by the subsequent phase [sgon►-lam], which is a 'live experience', and climaxes in the 'no-more-learning' phase [mi-slob-lam]. At this point, the individual cannot but perceive the world around him as-it-is intrinsically, as well as perceive all that constitutes this world as being harmoniously interrelated. Contemplative understanding is never it thoughtless and senseless absorption in an imaginary absolute, but is always active in the special sense of not interfering. Man's actions and his very life become more meaningful once this phase has become operative. Furthermore, the 'way' involves the whole personality which is as much body as it is feelings, the mind, and man's set of values and interpretations. The Buddhist 'way' is thus most comprehensive in being it growth and health psv- chology.

The Accumulation Phase

The complexity of the Buddhist 'way' may be illustrated by the analysis of the phase of 'accumulation' by dPal-sprul O-rgyan 'Jigs-med rhos-kvi dhang-po (b. 1808):2

The accumulation phase is dealt with under five headings: (I) basis, (II) essence, (III) subdivisions, (IV) meaning of the word, and (V) levels.

(I) The basis consists of (A) the body and (B) the mind.
(A) The body refers to any living being in the realms of sensuousness and aesthetic forms, a►ul (B) the mind refers to single-mindedness in the world of sensuousness and to the states of consciousness on the six levels of meditative concentration.

(II) The essence comprises seven topics for self-growth: (A) to observe manners and morals individually on the level of an ordinary person: (B) to control the senses: (C) to be moderate in eating and drinking: (D) not to sleep during the first part and the latter part of the night, but to exert oneself spiritually; (F.) to delight in being consciously alert and aware of what is acceptable and of what is to be shunned]; (F) to cultivate those positive factors which are the cause [for one's real freedom, such as never to feel sorry for it positive action or attitude, to he cheerful, to he confident, to be devoted]: (G) and to generate diligence in listening to instructions, in thinking about them and in making them a living experience.

(III) There are three subdivisions: (A) a low-level accumulation in view of the fact that it is uncertain whether the 'linkage phase' will set in; (B) a medium-level accumulation in view of the fact that the 'linkage phase' will set in during a future life-situation; and (C) a high-level accumulation in view of the fact that the 'linkage phase' will set in during this very life. The first of these involves the four essential inspections; the second, the four proper exertions; and the third, the travelling of the path by means of the four foot-like supports of spiritual growth.

(A) The practice of the `four essential inspections' is the 'way' that deals analytically with particular existents and has five topics: (a) the object inspected; (b) the manner in which it is inspected; (c) the essential factors of inspection; (d) the necessity of inspection; and (e) the meaning of the word.

(a) The object inspected is the body, the feelings, the mind, and the constitutive elements of reality. The body is a'without' [in the sense of being the sensory apparatus
making up the 'body' of a sentient being and the objects for this apparatus]; a 'within' [as one's own sensory apparatus]; and both a 'without' and a 'within' [as the sensory apparatus of others as well as of one's self].

Feelings are pleasant, unpleasant, and neutral.

Mind is an eightfold or sixfold pattern [most important is the concept-channeled perception].

The constitutive entities of reality are the motivational forces with the exception of feeling; the fourteen schemata of interpretation; and the three absolutes.

Unregenerate persons fancy the body as the basis of a self; feelings as the foundation of what the self enjoys; mind as the substance of the self; and the constitutive elements of reality as the foundation of the refinement of the self. [Ordinary people entertain the wrong notion that the emotions project (a person) into evil forms of existence, while refinement leads to liberation.]

(b) The manner in which the object is inspected is twofold: (i) general and (ii) specific.

(i) The general characteristics are impermanence, frustration-painfulness, nothingness, and nonexistence of an ontological principle. These (qualifications apply to every object of inspection and hence) range from the investigation of the body to that of the constitutive entities of reality.
Here, the body is perceived as a decaying corpse, crawling with maggots, having this nature and this actuality, and not passing beyond this state of affairs.

All feelings are painfully frustrating. [Inasmuch as feelings are such as not to like unpleasantness but crave for pleasurableness, they are ultimately frustrating and hence co-extensive and identical with frustration. I however much one tries to leave frustration behind, only to that extent there is pleasurableness. Because of its former unpleasant character everything that is felt is painfully
frustrating.]

The mind is impermanent because it becomes something else due to the difference in its objects and its basis. [The objects and the senses are the basis. The cognition that operates through the senses changes from moment to moment].

All the entities of reality have no ontological principle. [In this context the personalistic principle is meant.]

The intrinsic characteristics such as the elementary forces of solidity and so on, as well as that which has the defining characteristic derivative from (the primary elementary forces) such as the eyes and so on, make up the body; experiencing is feeling; cognition of objects is mind; keeping the intrinsic characteristics apart is (what is meant by) 'constitutive entity of reality'.

(ii) The specific manner in which the object is inspected has to do with the difference in the objective reference (or the epistemological object), which for a follower of the Hinayana is his own body exclusively, while for it follower of the Mahayana, it is his own body as well as that of others; and with the difference in thinking about its observable qualities, which for a follower of the Hinayana is the notion of impurity, while for a follower of the Mahayana, it is the conviction that all that is is the open dimension of Being (manifest in being); and with the difference in attainment, which for a follower of the Hinayana consists in a sense of renunciation, while for a follower of the Mahayana it is the realization of a non-localizable Nirvana, as there is nothing to be rejected or to be accepted once the real nature (of reality) has been understood.

(c) The essential factors of inspection are discriminative appreciation and inspection.

(d) The necessity of inspection is to resort to the antidote of becoming involved in the four perverse notions that
come through sloppy thinking [The antidote is, in general, 
(the awareness that) the six kinds of sentient beings 
depend (for their existence) on kanma, that karma depends 
on the emotions, that these depend on the four perverse 
notions that come front sloppy thinking, that these depend 
on the mild-as-such which is (an) ultimate reality and a 
radiant light. Mind-as-such does not depend on anything 
else. An analogy for this is the dependence of the 
elementary forces on space.]; and it is also the reason for 
making it start with the Four Truths. As is stated in the 
.11udh yuntarih~aga, IV, 1:

Because of ineptitude, because of hankering; as 
causality,

Because of foundation, and because of non-delusion,

The four essential inspections are to be undertaken

In order to make it start with the Four Truths.

(e) The meaning of the word 'inspection' implies that the 
follower of the I linayana applies his discriminative 
acumen to the object of inspection, while the follower of 
the Mahayana applies inspection to the object of his 
discriminative appreciation. [Having distinguished 
between the general and intrinsic characteristics of the 
body and other topics by way of discriminative 
appreciation and then preserving its continuity by way of 
inspection is to apply inspection to the object of 
discriminative appreciation. To investigate by 
discriminative appreciation the epistemological object that 
is kept steadily before the mind by inspection, and then to 
become convinced that it has no ontological principle, is to 
apply discriminative acumen to the object of inspection.]

(B) The practice of the 'four proper exertions' is the 'wav' 
that has conic into existence through efforts. It has five 
topics: (a) the object (of one's exertions); (b) the manner in 
which one exerts oneself; (c) the essential factor in 
exertion; (d) the necessity of exertion; and (e) the meaning
of the word.

(a) The object of one's exertions is fourfold insofar as refinement by positive forces or defilement by negative forces have conic or have not come into play.

(b) The manner in which one exerts oneself is to generate an earnest desire for not generating negative forces that have not yet come into play [earnest desire precedes actual efforts]; to make efforts [which is to intend a state of tranquility, to broaden one's horizon, and to intend a state of equanimity]; to initiate assiduity [which counteracts states of depression and of ebullience]; to seize the mind [ie. to cheer the mind up by thinking of the (Buddha's) appearance if one should be in a state of depression]; and to settle the mind [ie. to draw the mind inward by feeling disgusted with Samsara if one should be in a state of ebulliencel.

(c) The essential factor in exertion is assiduity.

(d) The necessity of exertion is to weaken negative forces and to strengthen positive ones.

(e) The meaning of the word `exertion' is to sum up the abolition of negative forces. Or, it means to firmly settle the actions that are performed by the three gates of body, speech, and mind.

(C) The practice of the `four supports of spiritual growth' is the `way' of thoroughly effecting spiritual integration. It has five topics: (a) object; (b) the manner of growth; (c) the essence; (d) the necessity; and (e) the meaning of the word.

(a) Spiritual growth is concerned with the positive way.

(b) The manner of growth involves the abolition of five obstacles by resorting to eight endeavors. When one is about to exert oneself spiritually, laziness is the primary obstacle. To counter it, one has to resort to earnest desire
and assiduity [standing in a cause-effect relationship] as well as to confidence [as a basis] and cultivation (of one's abilities) [which rests on confidence]. When one actually goes about exerting oneself, forgetting the instructions (and injunctions) is the primary obstacle. To counter it one has to resort to inspection which will not let the observable qualities of the objective reference slip (from one's mind). When the potential is brought to life, states of depression and of ebullience are the primary obstacle. To counter them, one has to resort to an alert awareness. The method of countermanding states of depression and ebullience involves keeping the mind steady as an antidote to not making use of what counters them, and practicing equanimity as a countermeasure to overdoing things.

(c) In general the essence of the 'way' is spiritual integration, and in particular it is spiritual growth which involves the abolition of all that is negative through concentrative efforts whose support are earnest desire, assiduity, intentionality, and critical assessment. [To become involved with what one is going to bring to life, because one trusts in it, is earnest desire; to go about it joyfully is assiduity; to become single-minded is concentrative integration; and to examine whether states of depression or ebullience vitiate (this state) is critical assessment.]

(d) The necessity of spiritual growth is the realization of all that comes from the desire to actualize spiritual growth and what it involves.

(e) 'Spiritual growth' is all the qualities and virtues such as the five 'higher' kinds of immediate awareness, and since this serves as the 'basis' or 'support' for this realization, one speaks of 'supports of spiritual growth'.

(IV) The term 'accumulation' is used because it assembles the causes for absolute enlightenment.

(V) Level here means 'level of confidence' because of the active presence of confidence in the Real as absolute.
According to this account, 'spiritual integration' [tīngne-'dzin] is the indispensable precondition for man realizing his own nature. What man really is is both what the individual already is as a mind-body trait and what he makes of himself. This is a resultant of a dialectic between growth-aiding forces and growth-inhibiting forces. This dialectic operates in the area of 'spiritual integration' and can be illustrated graphically on the basis of MMi-pham's -sang-'grc1 phyogs-1◆c•tt'i mun-sel-gyi spyi-don 'od-;sal snying-po (fol. 58lf) [See Appendix, Figure 1, p. 118].

Mind and Mental Events

It will be helpful for understanding the nature and place of mind' in Buddhist psychology to first clarify the symbolism involved. Theorems like `mind' and `mental events' seem innocent enough as common-sense terms, but in philosophical and psychological literature they are not used with their common-sense meanings; rather, they are given highly technical philosophical-psychological and contextual connotative meanings. A presentation of any subject matter is a body of propositions which itself is a set of concepts. A concept is a term to which a meaning has been assigned either by having it denotatively associated with some datum or set of data immediately present, or by having a meaning proposed for it theoretically by the postulates of a specific, deductively formulated theory. The former procedure leads to `concepts by intuition', the latter to `concepts by postulation'.

Thus, in traditional Western philosophy and (theoretical) psychology, `mind' has been a postulate or, to be more precise, a syntactically designated universal, regardless of whether it was conceived (1) as the self or subject which perceives, remembers, imagines, feels, reasons, wills, etc., and which is functionally related to an individual bodily organism, or (2) as a metaphysical substance which pervades all individual minds and is contrasted with material substance. Underlying the first
The proposition is, of course, the postulate of a center `which stands in its common asymmetrical relation to all the mental events which would be said to be states of a certain mind', and which in its commonest form involves a Pure Ego which is different from the events it holds together. The postulational character of the second proposition needs no further elaboration.

In Buddhist psychology 'mind' and 'mental events' are concepts lrv intuition whose complete meaning is given by something immediately apprehendable, and as such they are denotatively given particulars. This is evident from Ye-shes rgyal-ntshan's account. I says,

To be aware of the mere facticity and haecceity of an object is mind [sems], and on the basis of this objective reference to become involved with the object by way of other specific functions is said to be the operation of mental events [sems-bvung]. [Fol. 4a]

Ile then continues,

To be concerned only with the objective reference but not with what the other specific functions perform, is mind [sews] as it primary operation, while an awareness which becomes involved with this object by way of these specific functions, such as those following the operation that deals with the objective reference, is it mental event [sems-bvung]. [Fol. 4b]

There are several remarks of a general logical nature to be made.

(i) We may begin with the number of terms to which it given term may stand in the relation R. If A is the progenitor of B, there may he many terns other than B to which A stands in the same relation. In the case of 'mind' [sems] and 'mental events' [sems-hyung] we have both it many-one and a one-many relation. The former says: the relation R is such that when the referent is given, the relatum is determined, but there may be many referents:
seats-hyung R semis. The second is the converse of the former: sems R .sems-hyung.

(ii) If it number of teens [sems-hvung] stand in it common relation to a certain other term [sems], it necessarily follows that they stand in a symmetrical relation to each other. If 'feeling tone' [tshor-ha],'conceptualization' ['du-shes] and so on be children of `mind', they stand in the relation of `brotheror-sister' to each other.

(iii) It is tempting to see in `mind' a center, a certain particular existent or kind of Pure Ego which stands in a common asymmetrical relation to all the `mental events' which would he said to be states of a certain mind, or, since `mind' is itself an event, to see it as being of the same nature as the events which it holds together. Buddhist psychology, however, has generally rejected the assumption of a center in either sense. In any case, if a number of terms [sems, sems-byung] be interrelated in a characteristic way, it follows that there is something to which they all stand in a common asymmetrical relation, even if there be no center in the system. The reason is that each of them is a constituent in the fact that they are all related to each other in this particular manner. It is this filet that stands in a common asymmetrical relation to all other terms.

The rNying-ma-pa philosophers must be given credit for having noted this implication and for having clearly distinguished between `mind' [sems] and `mind-as-such' [sems- nyid]-between pure fact, of which, strictly speaking, we can say nothing, although we may use words to denote it so as to find in the immediacy of our experience (before it is channeled through words and concepts by postulation) what the words mean, and described fact, which by its nature is such that we have formed a concept of something and now attribute the characteristics of which we have the concept to pure fact which cannot be conceptualized. But in conceptualizing a
pure fact, we have already falsified it and, in so doing, are forced to go further and further and farther and farther astray.

Following the technical diction of Buddhism, the distinction between `pure fact' and `described fact'-the one being, in terms of cognition, `pure awareness or cognition' [rig-pa], the other, the `lack of pure awareness' [ma-rig-pa]-presupposes pure awareness [rig-pa], but `described fact' does not presuppose `pure fact'. If, hence, if 'mind' [sems], as distinguished from `.Hind-as-such' [suns-nvid], is equated with 'lack of pure awareness' [ma-rig-pa], as contrasted with `pure awareness' [rig-pa], certain consequences follow. 'Lack of pure awareness' is listed among the `basic emotions', and yet it is co-extensive with 'wind' with which the `intellectual' functions are associated.

This shows that the distinction we ordinarily make between emotions' and 'reason' is a bifurcating description leading away from 'pure fact'. What we so describe by 'mind and the emotions' constitutes a malfunction of 'Mind-as-such' or 'pure awareness' or, to use it more comprehensive term, 'psychic energy'. (Again it has to be emphasized that these latter terms are pointers, symbolic ways of referring to an experience, but not symbols for some thing or other.) But even in this malfunctioning, the 'original psychic energy' (psychic energy here is understood as the positively 'good', or man's inner nature which, if it is allowed to guide his life, will let him grow in health and happiness) is not totally obliterated, but is present as appreciative discrimination' [shes-rab]. Appreciative discrimination is it value cognition, not an arbitrary evaluation, and contrasts sharply with the 'demands' [yid-la-bved-pa] that are constantly made by the ego, itself a demand or fiction [yid-la-bved-pa], on what is. These demands are inextricably intertwined with the powerful emotions of passion-Dust and hatred-aversion (Khrid-trig, 54: see source citations, p. 122).
The contrast between 'appreciative discrimination' and ego-centered demands' thus highlights the conflict between two major opposing forces in each of us. Through making demands we attempt to impose on and to interfere with all and everything; above all, we tend to cut ourselves off from the possibility of seeing ourselves as whole human beings and, as a consequence, we merely proceed under the aegis of suitability-for-purpose, of making everything no more than it means to our selfish, if not paranoid, ends. While through 'appreciative discrimination', we would be able to discover the potential for growth and health that is in its and to develop it so that we might, and could, grow more and more into it human being.

It is for this reason that the 'positive mental events', as aids to growth, play such a prominent role in the analysis of 'mind'. A 'good' or 'real' human being is one in whom all the human capacities are fully developed and functioning well. It seems that man as it living being demonstrates in his very nature this urgency for becoming more fully human, which the Buddhists indicated by the technical term de-bzhin-gshegs-pa'i snyingpo, which can be paraphrased as 'man's quintessence being the pressure towards Buddhahood'. Klong-then rab-'hyams-pa succinctly states in his Chos-dhtlings rin-po-clu'ii mchod (129a),

When intrinsic awareness [rig-pa] has been divested of minding [sems] and of the mistaken appearances that go with minding, there is no other way but to go to pure and unadulterated Buddhahood, because man's very nature, which is Buddhahood, has been laid bare in view of the fact that it has been divested of the obscuring forces.'

The obscuring forces are precisely what is otherwise termed mind' [sems] which we can now more accurately define as a malfunctioning and which therefore is placed at the beginning of the Twelvefold Chain of Dependent Origination,' marking the growing involvement in growth-
inhibiting forces that have us groping in the dark', 'running around in circles', in brief, erring and roaming about in Samsara. This situation itself is to be considered as an incentive to do something about it, which means that first of all we have to find out what has 'landed us in this mess' and, as an aid to finding out, we have the analysis of 'mind' and 'mental events'.
The Necklace of Clear Understanding
An Elucidation of the Workings of Mind and Mental Events
Verses of Veneration and Intention

I bow with folded hands to him who is inseparable from Lord Mañjúśrī, the reverend and excellent teacher. And I pray that he may accept me in his love for all times.

I bow to the supreme protector, Śākyamuni, Who illumines the world where he looks By his Omniscience from which all obscuring darkness Has gone and who has fulfilled the two requisites² By the power of his spirituality.

From the bottom of my heart, I fold my hands devotedly To the invincible Lord, Buddha’s representative. (2a)³

"Jam-dbyangs tManjughosa) is another manifestation of 'Jam-deal (Manjūsṛi) who has been explained by !sli-pham in his hShe.s-sbriog gi mchun grel pudnw dkar-po'i phrrng-bo as follows: lie is gentle ['jamj because he has overcome all evil afflictions and he is eternally youthful because his Being [skuj, radiating with the splendor [dpall of two dualities of benefitting oneself and others), never grows old.

2 The two requisites: the accumulations of profound knowledge and merits.

3 Figures in diagonals (eg. (2a)) indicate the beginning of each Tibetan folio.

Known as Maitreyanātha⁴ in all the three times Because he showers his love on all beings.
I bow to the most supreme leaders from among the Six ornaments of India,\(^5\) renowned as the Great Charioteers\(^6\)
Who, having been predicted by the Sugata himself, Illumined the auspicious Buddha Teachings, profound and vast.

I bow to 'Jam-mgon Lama\(^7\) worthy of praise
Like the Buddha-sun to unfold again and let bloom forth
The forest of Sūtras, Tantras, and commentaries,
Like the thousand-petalled lotus, in this country
Surrounded by snow-capped mountains.

May the light of the sun-like reverend Guru
Reside forever in the petal of the lotus-like heart \(2b\)
Brightening the mental eye
That views the auspicious path
By merely seeing a ray of his charismatic activity.

Even if others do not benefit from talk by people like me,
I am dealing here with the mind and mental events
Because I have been urged by others and because
I want to increase the training of my own mind.

► Maitreyanatha (he whose master is \laitreva): In the Western world, more commonly known as Asanga. Asaiiga styled himself \laitreyanatha in order to show his respect to his teacher, Alaitreya. Alaitreva, who at one time was the human teacher of Asanga, became identified with the future Buddha bearing the same name.

'The six ornaments of India are Nagarjuna, Arvadeva, Asanga, Vasuhandhu, l)ignaga, and l)harmakirti.

The great charioteers are Nagarjuna, the promoter of the \ladhvan ► ika, and Asanga, the promoter of the Yogacara.

'Jam-uigon Lama refers to Tsong-kha-pa who is considered to be an incarnation of Niaiijughosa.
Introduction to
Mind and Mental Events

Those intelligent people who are not content with merely acquiring food and clothing as long as they exist in this world, but take into account a future life by thinking what might become of them in the next world, should consider what is the root of their experiencing uninterrupted frustration by being driven around helplessly in samsāra extending over the three world spheres since beginningless time. Considering the matter in this way, they should realize that the frustration of this world does not conic without having a cause or from having it cause that is not appropriate to it, but that it comes from its inherent cause which is man's own actions (karma) and the emotions. Nagarjuna states,

As long as there is the belief in the skandhas, there will come from them a belief in a self. When there is a belief in an ego, then there is karma. From this, there will come (re)birth.

Skandha is the Sanskrit term for the five psycho-physical constituents: color-form, feeling (judgments), concepts and conceptual process, motivation, and consciousness in the specific sense of perception.

And (MMK. XXV, 10),

The root of samsāra is motivation. Therefore, the wise do not make plans. The unwise, therefore, become agents Because they see only unwiseness.

And Aryadeva states (Catuhsataka, XIV, 25a,b),
The seeds for the possible world are concepts. The objects are their field of activity.

And Candrakirti states,

It has been stated that the Mind truly establishes In manifold ways the world of sentient beings and The world as their container. All beings without exception have come from karma.

And Vasubandhu states (Ahhidharmakosa, IV, la),

The various worlds have come from karma.

And (Ahhidharmakosa, V, la),

The basis of existence are the six latent and overt (emotions).

Thus has it been stated many times.

Moreover, the sptjod-'jug (Bodhicaryavatara, V, 6) states,

The Buddha himself said, "Thus, all terror And also the countless frustrations Come from the mind."

And (Bodhicaryavatara, V, 17, 18a,b),

When one does not know the mystery of the mind Which is the most important thing regarding the dharma (3b), But wishes to gain happiness and to relinquish pain, He is hopelessly lost; therefore, I will properly take hold of and guard my mind.

Again it is said (Bodhicaryavatara, VII, 41-45),
Pain, an unhappy mind, the various terrors,
And separation from what one cherishes
Originate from acting in an evil manner.

Whatever good one does by intending it, turns,
Wherever one may go, into positive merits and
Will be respected in virtue of this outcome.

An evil doer, even if he desires happiness, will,
By his evil, wherever he goes, be overcome
By the sword of suffering.

Dwelling in the heart of a noble, fragrant, beautiful,
cool lotus,
Having splendid health by the food of hearing the
Buddha’s voice,
Possessing a glorious body born of the noble lotus by
the light of Enlightenment,
The Sons of the Buddha dwell in the presence of the
Victorious One by their own goodness.

Weakened through flaying by the attendants of
the Lord of death,
And having copper, melted by a scorching fire, poured
over one’s body, and then
Having been cut into hundreds of small pieces by a
flaming sword moving to and fro,
The evil doer falls to the ground of blazing iron
due to his many evil deeds.

"For the various concepts of hell, see 11. V. Guenther.
At, Jcu’cl t )rnu- ment ofLihcration, pp. 57-62.

Just as it has been expressed above, it has been said not
only once, but over and over again in the Sutras and
Tantras together with their commentaries, (4a) that the
whole of .saiiii.sura, the living beings and their world, have
come from their inherent cause which link is the power of karma and the emotions. So also, it has been said that the infinite qualities of the spiritual levels, the path of the three spiritual pursuits, their result which is Buddhahood, and the Buddha's charismatic activity have come from it positive mind as their inherent cause; and, therefore, the root of the whole of su►l►sura and irruna is mind.

Thus, it is essential to know what is meant by mind and mental events. Here in this brief analysis of mind and mental events, there are two parts:

1. Mind and mental events distinguished as to their individual nature and differentiation, and

2. A summary for making it living experience of what is gained by the analysis.
Mind and Mental Events
Distinguished as to their Individual Nature and Differentiation

Concerning the distinction between mind and mental events, the dbt►s-nth(i’ (Madhyantavibhaga, I, 8) states,

Seeing a thing belongs to mind.
Seeing its specific characteristic belongs to a mental event.

And the songt►-pa►ndz<ul (Abhidharmakosa, I, 16a) says,

Consciousness is a selecting awareness.

Accordingly, to be aware of the mere facticity and haecceity of an object is mind, and, on the basis of this objective reference, to become involved with the object by way of other specific functions is said to be the (operation of the) mental events.

The statement of the learned rCval-tshah”-”\W'hen sensory perception takes hold of a color patch (complex) as its major concern, there is it singling out process regarding the object”-(4b) was not made with reference to gaining certainty, but merely with reference to the (apprehension of) color form. In the wake of this operation of mind, mental events have the function of directing the mind towards the object on the basis of the objective reference and the function of other special operations such as not forgetting that which has been understood previously. Therefore, the mind as a primary operation is concerned only with the objective reference but not with what the other specific functions perform; a mental event is an awareness which gets involved with this object by
way of other specific functions, such as those following the operation, that (lea] with the objective reference.

Someone may think, "Are mind and mental events one and the same stuff or are they different?" The mgon-pa nulzoil (Abhidharmakosa, II, 23) has the answer:

The mind and mental events are certainly together.

It has been said that mind as the primary factor and the mental events as its entourage are of one stuff and co-existent by way of the five functional co-relations. Thus, since mind and mental events arise together, as far as time is concerned, and are of one and the same stuff and not of different kinds of stuff, it is inadmissible to claim that mind and mental events are not co-existent in time and are different entities and that they separately deal with their objects. Let me explain this further. When there is memory, or inspection of an object like it colored patch, both mind as the primary factor and its attendant function, memory, correspond to each other in their reference to their object which is this color patch. But their separate functions (5a) consist in the fact that the mind is merely concerned with the facticity and haecceity of the object, while, in view of its function of not forgetting (or losing sight of it), mind is spoken of as memory-inspection [dran-pal. But these two (mind and mental event) are not separate entities as are a pillar and a jar.

This explanation is based on the chos ningon rgya mtsho'i snying po which is an explanation of the chos mgon-pa kunLas htus-pa (Abhidharma
cay). According to the tshud ma rigs rgyan (Pramanavartikalamkara),

The defining characteristic of the mind as the primary factor is to he in union with its attendant mental event by way of the five functional co-relations, and the defining characteristic of mental events is to be in union with the mind as the primary factor by way of the five functional co-relations.
These five functional co-relations are dealt with in the nungon-pa ntdzod (Abhidharmakosa) and the inngon-pa kunhtus (Abhi(tharmasamuccava).

The nzungon-pa nulzod (Abhidharmakosa, II 34d) says that the five functional co-relations are:

1. Alike basis [rtes-mtshungs]
2. Alike objective reference [dmigs mtshungs]
3. Alike observable quality [rnau mtshungs]
4. Alike time [dus mtshungs]
5. Alike stuff [rdzas mtshungs]

The meaning of each of them is as follows:

Alike basis means that the sense faculties depend on a mental attitude [sems], so the mental events are alike in this way.

Alike objective reference means that the mental events have the same objective reference as the one taken up by mind.

Alike observable quality means when the mind has a blue content, then the mental events are bluish in content.

Alike time means the mind and mental events arise, stay and fade simultaneously. (5b)

Alike stuff means of whatever stuff it mental attitude may be, the same stuff is the mental event; for example, feeling.

Now the nuigon-pa kun-htus (Abhi(tharmasamuccaya, p. 33-34) says that the five functional co-relations are:

1. Alike stuff [rdzas intshungs-pa]
2. Alike objective reference [dmigs mtshungs]
3. Alike fact [ream mtshungs]
4. Alike time [dus mtshungs]
5. Alike spheres and levels [khams clang sa mtshungs-pa]

Alike stuff means that in the entourage of one attitude as the primary factor, there is only one corresponding mental event such as feeling because two different corresponding events cannot take place.

Alike ohjc reference and alike fact means that as the observable quality and its presence can have only one objective reference, and as according to this objective reference and observable quality there is either an emotional coloring or not, when mind as the primary factor becomes emotionally tainted, so do the mental events as its entourage. But when the mind becomes such that it is not affected by what otherwise is bound to break [zag-med], the mental events as its entourage become such that they are not affected by what otherwise is bound to break.

Alike time means the mind as a primary factor and mental events as its attendants arise, stay, and fade simultaneously.

Alike spheres and levels means when the mind as primary factor is on the level of knnualhntu (world of desire), the mental events belonging to the sphere of the rupadhntu (world of form) or the arupt/adllatu (world of no form) cannot arise as its entourage; and for a mind on the level of rupat(hntu, mental events belonging to the kumadhutu cannot arise as its entourage. To whichever sphere a mind belongs, it is on this sphere also (6a~ that the mental events as its entourage must arise.

**Mind [sems]**

As to the mind, the phung-po Inga'i rub-b/>/ed (Panca-
What is perception? It is a distinct awareness of what is before the mind.

The nmgon-pa mdzod (Abhidharmakosa, I, 16) states,

Perception is it process of singling out.

The learned rCyal-tshab declares,

The individualizing perception by means of being aware of the mere factual presence of an object is the defining characteristic of the mind.

When one analyses perception, one finds that there are six patterns. The nmgon-pa kun-lus-btu.s (Abhidharniasamuccaya, p. 12) states,

What is perception? There are six patterns: visual perception, auditory perception, olfactory perception, taste perception, tactile perception, and categorical perception.

What is visual perception? It is a function of selecting colorform as its objective reference. This takes place in the eye.

What is auditory perception? It is a function of selecting sound as its objective reference. It takes place in the ear.

What is olfactory perception? It is a function of selecting smell as its objective reference. It takes place in the nose.

What is taste perception? It is a function of selecting taste as its objective reference. It takes place in the tongue.

What is tactile perception? It is a function of selecting touch as its objective reference. It takes place in the skin.

What is eatc perception? It is a function of selecting out conceptualized contents [chos dmigs]. It takes place in the mind (6h).
Although there seem to be many specific distinctions in the earlier and later philosophical systems concerning the three conditions of these six perceptual functions, they are not dealt with here.

It is trite that Asafiga and his brother (Vasubandhu) speak in their works about the uloyarijnana and klislamanorijjia na. But I will write in a general way about mind and mental events in so far as they are absolutely necessary for our knowledge of how one's actions (karma) and emotions tie one to sanrarsara when, in view of the states on the path to Enlightenment, it person who is on an intermediary level thinks about the evils of .sarpsara and how they come about. The question whether there is an aluyarijnana or not poses a very great and specific problem in the later and earlier philosophical systems. Asafiga and his brother who follow the dgong.s-pa rjes 'grel (Sandhinirmo- canasfttra) divide the Buddha Nord into implicit and explicit statements and posit an dlatlacijnana. They declare the whole of reality to be of the nature of mere mentation [sems tsam gyi bdag-nyid].

Nagarjuna and Aryadeva, who follow the ting nge 'dbin rgyal pa'i nido (Samadhirajasutra) and the blo-gro.s mi-zad-pa'i mdo (Aksayamatipariprcchasntra), also divide the Buddha Word into the explicit and implicit statements but do not accept an alailacijnana. They explain the Sfitras that deal with an alayargnana as having an implicit meaning and state that the whole of reality is a set of logical fictions [drang don dgongs pa can].

Therefore, in the holy land of India, (7a) there are two great trends in the Mahayana. These do not differ in their intention insofar as it concerns the development of the Enlightenment attitude and the practice of the six perfections. There is only a difference in philosophical thinking. In spite of this difference, neither of these two great leaders, Nagarjuna or Asanga, is superior or inferior as far as his philosophical thinking goes. As has been made clear by the Buddha himself in
many Sutras, these two ways of elucidation correspond to the individual understanding of those who have to be guided.

Therefore, if you want to know more deeply the specific points in the teaching of Asanga and his brother positing an alayavipiana and by implication establishing the whole of reality as being of mentation only, you should look up the works of Asanga and his brother as well as Tsong-kha-pa's legs-bshad. If you want to know the specific points of Nagarjuna's thought, you should look up those works which are so valuable in the three worlds, the lhag mnthong and the rtsa 'jug gi maw of Tsong-kha-pa.
MENTAL EVENTS [SEMS-BYUNC]

In the discussion of the mental events, the plung-po inga'i rab byced (Pa►icaskandhaprakarana, P. ed. 11:3, p. 2:37, 4.4) states the nature of mental events as follows (7b):

What are mental events? They are whatever correspond to the mind.

When these mental events are classified, there are fifty-one:

1. Five ever present ones beginning with feeling-tone
2. Five object-determining ones beginning with interest
3. Eleven positive ones beginning with confidence-trust
4. Six basic emotions beginning with cupidity-attachment
5. Twenty proximate emotions beginning with indignation
6. Four variables beginning with drowsiness

The ph toga rub-b yc'd (Pa►icaskandhaprakarana, P. ed. 113, p. 237, 5.1-5.2) states:

1. Five are omnipresent.
2. Five are always certain about any object which becomes their domain.
3. Eleven are positive (ie. only operate in positive attitudes).
4. Six are the (basic) emotions (i.e., they are upsetting and, by coloring one's view, make clarity of mind turbulent).

5. The remaining are proximate.

6. Four are variable.

**The Five Omnipresent Mental Events [kun 'gro inga]**

The five omnipresent mental events (that operate in the wake of every mind situation) are:

1. Feeling-tone [tshor-ba]
2. Conceptualization ['dti-shes]
3. Directionality of mind [sems-pal's]
4. Rapport [reg-pa]
5. Egocentric demanding [yid la hued-pa]

**Feeling-tone [tshor-ba]**

In the nгон-pa kun-las-btus (Abhidharmasannecava, p. 2), the nature of feeling is explained as follows:

What is the absolutely specific characteristic of feeling? It is to experience. That is to say, in any experience, what we experience is the individual maturation of any positive or negative action as its final result.

Here, the experience of feeling is called maturation. This is said for the purpose of becoming aware of the fact that pleasant or unpleasant feelings arising in us are nothing more than the result of the maturation of our action. The lain-rim clues-nun explains this as follows:

The infallibility of our actions means that, whether we
be ordinary persons (8a) or exalted beings, any pleasure with its pleasant feeling tone which occurs in us or any feeling of relief as is felt in a cool breeze by those born in hell, starts from previously accumulated positive actions, for it is impossible for pleasure to come from negative actions. So also, every painful feeling, even if it may occur in a saintly person, comes from previously accumulated negative actions, for it is impossible for pain to come from positive actions. The rin clu'n 'phreng-ha (Ratnanala) states,

From negative actions come all frustrations
And also, all evil forms of life.
From positive actions come all happy forms of life,
And also, all happiness in every walk of life.

Therefore, pleasure and frustration do not originate without a cause nor do they originate from inappropriate causes such as the gods Visnu, Siva, or anyone else. From generally positive or negative actions come generally positive or negative feelings. The various shades of these feelings come from the intensity of positive or negative actions. In each case, the certainty that the relationship between one's action and its result is certain and infallible, with no irregularity whatsoever, is the right view held by all Buddhists and praised as the foundation of all that is bright.

Feeling is classified as pleasant, unpleasant, and indifferent. The phung-po inga'i rush-byed (Pancaskandhaprakarana, P. ed. 11:3, p. 237, 3.6-4.2) (8b) states,

What is feeling? It is three ways of experiencing-pleasantly, unpleasantly, and indifferently. 'Pleasant' is that which one would like to feel again (when the original feeling is over). 'Unpleasant' is what one would like to get rid of when it is present. 'Indifferent' is where neither of these two desires occur.
These three feelings become six according to their division whether they occur physically or mentally so that one has three physical feelings and three mental feelings.

The three physical feelings are: physically pleasant, physically unpleasant, and physically indifferent.

The three mental feelings are: mentally pleasant, mentally unpleasant, and mentally indifferent.

The difference between physical and mental feelings is that physical feelings occur within the realm of the five sense perceptions while mental feelings are those which occur in the realm of thought.

Why do we talk about physical feeling as that which occurs within the realm of sense perception? The bzhi brgya pa (Cat►►hsataka) says,

Darkness is everywhere just as the skin covers the whole body.

Since the skin covers the whole body from head to toe, feelings which originate in the realm of the other four sensory perceptions are also called (9a) physical feelings.

If we further distinguish those six feelings as subjectivistic feelings and transpersonal feelings, we have an additional twelve which make up a total of eighteen. Subjectivistic feelings are those that are always on the level of thinking that they are my feelings, while the transpersonal feelings are those which are felt on the level of primal awareness which immediately understands that there is no abiding principle to which the self may be reduced.

You might ask how it is that those who have this primal awareness by which they immediately understand that the self is not an eternal entity, have painful feelings, since the transpersonal feeling just explained would be in the realm of frustration. Oh, there are many reasons for this. For
example, the did-ha lung (Vinavasastra) states,

Even those Arhats who have rejected the belief that self is an eternal entity still suffer such unpleasant feelings as headaches as a result of their former actions.

There are six feelings according to their location:

1. Feelings which occur in the rapport established by the eye
2. Feelings which occur in the rapport established by the ear
3. Feelings which occur in the rapport established by the nose
4. Feelings which occur in the rapport established by the tongue
5. Feelings which occur from the rapport established by the body
6. Feelings which occur from the rapport established by the mind

Since each of these six can be pleasant, unpleasant, or indifferent, one can speak of eighteen feelings. If I were to deal with these in detail, it would be too lengthy, so I shall stop here.

Feeling classified according to the function of rejection and aiding is twofold:

1. A sustaining feeling of addiction
2. A sustaining feeling of realization

The sustaining feeling of addiction occurs on the level of desiring sensuous things of this world. The sustaining feeling of realization is to turn away from being addicted to these things and occurs on the level of those thought
processes which are summarized by the subject matter of the first meditative stage.21

This division into two kinds of feelings is made here for the purpose of knowing how the strength of feeling itself may, on the one hand, bring to light an existing desire or bring about detachment from this addiction through the subject matter of meditative concentration. But if one wants to know this more deeply, one should look up the Ahhidharmakosa, the Ahhi- rlltarmasamuccaya, and also the Mang-chub lam-rim in order to prevent the three feelings of pleasure, pain, and indifference from becoming the cause of the three poisons.22

**Conceptualization ['du-shes]-''*

In the nutgon-pa kun-(as-btus (:~hhidharnrisamuccava, p. 2), the nature of conceptualization is stated as follows:

What is the absolutely specific characteristic of conceptualization? It is to know by association. (10a) It is to see, hear, specify, and to know by way of taking up the defining characteristics and distinguishing them.

It is an awareness that deals with the specific characteristic of an object when the object, sensory capacity, and cognitive act have joined.

And in the phung-po Ingo rab-h►/ed (Pancaskandhaprakarana, P. ed. 113, p. 237, 4.2) it is explained as follows:

What is conceptualization? It is taking hold of the defining characteristic of an object.

Conceptualization is twofold:

1. Dealing with the defining characteristic

2. Dealing with the specific characteristic

The former deals with the specific characteristic of an
apparent object in it conceptless perception and the latter deals with the specific characteristic of an apparent object in a judgmental perception,

The bases for the operation of these two forms of conceptualization are seeing, hearing, specification (differentiation), and full cognition. Their meanings are:

To see is to make it proposition about what has been seen in immediate perception.

To hear is to make a proposition on the basis of trustworthy information.

Di means to make it proposition about an object which is ascertained as this or that object in view of its characteristics.

Full cognition is to make a proposition by way of concept about this object as it is, in the certainty of immediate perception.

The ntngon-pa ntdzod (Abhidhariukosa, I, 14c,d) explains the two aspects of conceptualization as the defining characteristic and as propositions. That is to say, the former is to distinguish the individual color design such as blue, yellow etc., and the other is to distinguish the individual propositional form in making such statements as, "This is it man" and "This is a woman." -21 (1 Oh)

Conceptualization is sixfold25 according to the basis from which it operates. That is,

1. Those that start from the rapport that exists in visual perception

2. Those that start from the rapport that exists in auditory perception

3. Those that start from the rapport that exists in olfactory perception
4. Those that start from the rapport that exists in gustatory perception

5. Those that start from the rapport that exists in tactile perception

6. Those that start from the rapport that exists in ideational (thought) perception

It is again sixfold in view of its reference.

1. Conceptualization which has defining characteristics

2. Conceptualization which does not have defining characteristics

3. Conceptualization which is limited

4. Conceptualization which is broader

5. Conceptualization which is infinite

6. Conceptualization which is nothing whatsoever

The first (‘conceptualization which has defining characteristics’) is threefold:

1. One in which one knows the coherence between names and things

2. One which refers to the fact that everything composite is transitory

3. One which clarifies this reference

The second is also threefold in view of the fact that it is opposite to the previous ones.

'Limited conceptualization refers to the ideas of those who are concerned only with the pleasures of this world and to all those ideas of the ordinary people who are in the
world of desire and who have not reached the subject matter of meditation.

The 'broader viewpoint' refers to those ideas found in those who are on the level of aesthetic perception and to the concepts referring to the aesthetic world perception.

The 'infinite viewpoint' (1 (1 a) refers to those ideas that deal with an experience that is wide and open like the infinite sky and the experience of the unlimitedness of the cognitive capacity.

The sixth is the idea of an experience which one would objectify as nothing.

Directionality of mind [sems-pa]

In the ►ngon-pa kun-las-btus (Ahhidharmasaniocava, p. 2), the nature of directionality of mind is described as follows:

What is directionality? It is a mental activity that propels the mind forward. It has the function of making the mind settle on what is positive, negative, or indeterminate.

It is a mental event that arouses and urges the mind with its corresponding events on towards an object.

From among all mental events, it is said to be the most important because the force of this mental event sets the mind and any mental event on to the object. Just as iron cannot but be attracted by it magnet, so also the mind cannot be but set on an object by this mental event.

It is sixfold in view of the basis from which it operates:

1. Directionality occurring in visual situations
2. Directionality occurring in auditory situations
3. Directionality occurring in olfactory situations
4. Directionality occurring in gustatory situations

5. Directionality occurring in tactile situations

6. Directionality occurring in thought situations

While this directionality is a mental operation, action (11 h) is twofold insofar as it is directionality and intentionality.

The mgon-pa nuhod (Abhidharmakosa, IV, Ie,d) states,

*Action is directionality and what has been set up by it. That which has been set up are bodily and verbal acts.*

Intentional activity takes place in bodily and verbal actions. Although they are unlimited, in summarizing their most important features, there are seven in reference to actions by body and speech and ten in reference to actions in a social context. Therefore, the mdzod (Abhidharmakosa, IV, 66) states,

*From a broad viewpoint, The paths of action are said to be ten According to their being wholesome and unwholesome.*

The classification of actions is threefold: positive, negative, and indeterminate; or, meritorious, non-meritorious, and neutral.

It is very important to know well the differentiation of how to recognize these actions and how their effects come about, how they project (a life style) and bring about its fulfillment, how they are to be experienced with certainty and without certainty, how in the way of being experienced with certainty they are experienced immediately, indirectly, or in the future; but it would he too much to go into these details. Those who are eager and intelligent will know then when they study the Ah1 idlia nakosa and its commentary by the great
Rapport [reg-pa]'-s

The nignon-pa kun-las-btus (Abhidharmasamccaya, p. 6) explains rapport as follows:

What is rapport? It is it determination, it transformation ill the controlling power, which is in accordance with the three factors coming together. Its function is to provide it basis for feeling.

It is an awareness in which it pleasant feeling is felt when the object, sensory capacity, and cognitive process have come together and Which is restricted to the appropriate object. Transformation in the controlling power means that when the visual sense meets a pleasant object and the feeling becomes the cause of adhering to this pleasure, rapport restricts the pleasant color-form and the feeling becomes the cause of pleasure.

According to its operation, rapport is sixfold:

1. Rapport With visual situations
2. Rapport with auditory situations
3. Rapport with olfactory situations
4. Rapport with gustatory situations
5. Rapport with tactile situations
6. Rapport with thought situations

Egocentric demanding [yid la byed-pa]2’1

The nignon-pa kun-las-btus (Abhidharmasamccaya, p. 6) explains egocentric demanding as follows:

What is egocentric demanding? It is a continuity having
the function of holding the mind to what has become its reference.

It is a cognition that keeps the complex of mind in its specific objective reference.

The difference between directionality and egocentric demanding is that directionality brings the mind towards the object in a general move K 12b), while egocentric demanding makes the mind jump on this particular objective reference.

The reason for speaking of these five mental events, beginning with feeling-tone as omnipresent, is that they are lumped together because they are events that operate in the wake of every mind situation.

Moreover, if any one of the five omnipresent mental events is missing, the experience of the object is incomplete. If there is no feeling-tone, there is no relishing of it. If there is no conceptualization, one does not get the specific characteristic of the object. If there is no directionality of mind, there is no getting on to the object. If there is no rapport, there would be no basis for perception. If there is no egocentric demanding, then the various objects would not be confronted. Hence, in order to have a complete appreciation and enjoyment of an object, these five omnipresent mental events must be there altogether, completely and fully.

The Five Object-determining Mental Events [yul nges inga] ir'

The five object-determining mental events are:

1. Interest ['dun-pa]
2. Intensified interest which stays with its object [mos-pa]
3. Inspection (to learn more) [dran-pa]
4. Intense concentration [ting-nge-'dzin1:11]

5. Appreciative discrimination [shes-rab]

Interest ['dun-pa]

The n gördön-pa kun-las-htus (_ I)hicllharmasainuceava, p. 6) explains the nature of interest as follows:

What is interest? It is the desire to endow a desired thing with this or that particular attribute, and has the function of laying the foundation for making a start on assiduous striving.

It is an awareness which gets involved with the intended object.

The way of laying the foundation for making a start on assiduous striving is explained in the dims mthrt' (Madhvantavikhaha, IV, 5a,h) as follows:

The occasion, that which depends on it, and their cause and effect relationship.~3'

The loin-rim t'hi'n-mo states,

If one is unable to suppress laziness which delights in the non-inclination towards the practice of meditation and which delights in the factors not conducive to the practice, then one quickly loses all interest because first of all ( I:3a) one does not allow the mind to go into concentration and, even if one should attain concentration, one cannot maintain its continuity. Therefore, at the very beginning it is most important to overcome laziness. When one has attained it state of alertness which is satiated happiness and pleasure both on the physical and mental level, and when one is not weary to apply himself day or night to what is positive, then laziness is overcome. In order to generate this alertness, it is important that one has the concentration which is the sustaining cause of the
aforesaid state of alertness and that one makes this it continuous process. In order to have the power of concentration, one must have it strong and continuous involvement in concentration. In order that concentration be a sustaining cause factor, one must repeatedly invoke it firm conviction which enraptures one's whole mind because one has seen the virtues and value of concentration. To understand these qualities and processes in this order must he taken as the most essential point because they become clear and certain in seeing them in one's own experience.

The meaning of the passage, 'the occasion' in the work cited above (Madhyantavibhaga), is as follows: occasion means interest, the starting point of endeavor. Theft which depends on it means endeavor or effort; the cause, the sustaining force of interest, means a firm conviction regarding the quality and value of the thing. The effect or outcome is alertness.

If one thinks deeply about this in the manner that Tsongkha-pa has explained, one may discover a special importance attached to his words; however, if one has put into one's mind merely the words of the great charioteers, who state that the progress of the path follows it distinct pattern, one will gain certainty regarding practice; but because one (131 believes merely the words and thinks only of the arguments and supporting teachings of those great charioteers, he not only rejects the opportunity of practice, and thus loses the opportunity of obtaining certainty about it, but he even loses the opportunity of understanding anything. Just look at how the path in which the Buddhas delight comes to life in oneself!

Interest is threefold:

1. That with which you want to meet
2. That with which you do not want to part
3. That in which you really want to get involved
There are many other involvements of interest such as the involvement with desired things and involvement with what one sees.

Intensified interest which stays with its object
[mos-pa]

The miigon-pa kun-j►tus (Abhidharmasamuccava, p. 6) explains the nature of intensified interest which stays with its object as follows:

What is intensified interest? It is to stick to the determined thing just as it has been determined, and the function of intensified interest is that it cannot be taken away.

It is an awareness by which one stays with what the mind [yul-can] has logically established as this is so and not otherwise.

Here, its specific function has been described in the words, 'it cannot be taken away', because when one has it firm conviction about the object, one is certain and cannot be swayed by anyone. For example, if one thinks about who is the infallible refuge, the Buddha or another, then one will find out that only the Buddha K I4a) is the infallible refuge. Then one becomes certain, through valid means of cognition, that the teachings of the Buddha and the community which has realized the teaching are the infallible refuges. Anyone who has this firm conviction cannot be swayed by any other opinion and is counted as it Buddhist. On this basis the bright qualities (of spiritual progress) increase. Therefore, the spyod-'jug (Bodhicarvdvatara, VII, 40) states:
The Buddha has said that
The root of everything positive
Is the intensification of interest.
That root always matures
By producing an effect.

Inspection [dran-pa]

The nulgon-pa kun-his-btus (Abhidharmasamuccaya, p. 6) explains the nature of inspection as follows:

What is inspection? It is not to let what one knows slip away from one's mind. Its function is not to be distracted.

It is an awareness which has three specific features:

1. Specific feature of the object—it is a thing you know

2. Specific feature of the observable quality—this object is not forgotten

3. Specific feature of the function—it remains steady

Since inspection does not arise concerning a thing which has not been well known previously, the specific feature of its function is said to deal with something familiar. Since inspection does not operate on an object which does not come to mind at present even though it may have been familiar before, it implies the feature of not letting the object slip out of the mind. On the basis of this special function, the levels of the mind can grow in intensity and this means that mind does not swerve (14b).

The fact that inspection must possess the three specific functions is very important whether one deals with the Sutras or Tantras. Therefore, Nagarjuna (Suhrilkeka, 54) has said,
The Tathāgata has taught that
Inspection belonging to the great beings
Is the only path to walk.
To this hold tight and preserve it.
If inspection slips, everything is lost.

The spyoal-'jtt¢; (Bodhicaravatira, V, 26-30) states,

Those who have listened and have confidence
But do not apply assiduous striving,
By being attached to the defect of not knowing properly,
Will become soiled by falling away from their status.

Those thieves, the lack of awareness and
The pursuit of that from which inspection slips,
Not only rob one’s wealth and a happy state of existence,
But they also cause one to wander about
in evil existences.

These robbers, which are the emotions,
Go about seeking an opportunity.
When they get it, they steal the wholesome
And even destroy life in a good existence.

Therefore, never, never allow inspection
To wander out of the mind’s door.
But if by chance it should, then by recalling
Those pains of evil existence, bring it back close to you.

By keeping company with a guru and
By the instructions of the learned,
Those who are pious and pay respect because they
are afraid something may go wrong
Will gain inspection which develops the positive.

All values (qualities) inherent in the various levels and
paths depend on inspection and awareness. Since any
attainment of concentration, he it on the basis of the Sutras or Tantras, must he attained by virtue of this specific function, (15a) the application of inspection is very important for those who want to have this experience coming from the bottom of their hearts.

Thus, the spyod-'jug (Bodhicarvavatara, V, 2-23) states,

May my possessions, my status,
My body and my life be for nothing!
May even all other wholesome things come to nought!
But, may the mind never be lessened.
To those who desire to guard the mind, I pray, saying, “Preserve your inspection and awareness Even if it costs you your life.”

Intense concentration [ting nge 'dzin]

The nuigon-pa kun-los-hlus (Ahhidharmasannuccaya, p. 6) explains intense concentration as follows:

What is intense concentration? It is one-pointedness of mind which continues with an idea, and its function is to become the basis for awareness [sties-pal.

It is to let the mind continue with its objective reference. The reason for calling the particular content of intense concentration an idea is that in practicing concentration, one holds the mind to what is postulated by intellect, and this is an idea.

Moreover, although there are countless things which may appear as that on which one can concentrate, in brief, there are four:

1. The objective reference which purifies the conduct of life

2. The objective reference which purifies emotions

3. The objective reference which are the (four) encompassing activities (of loving kindness, compassion, joy and equanimity)

4. The objective reference with which the wise deal

The objective reference with which the wise deal is said to be limitless and refers to (such topics as the five) constitutive elements, the (three) levels of existence, the (six) perceptual spheres, dependent origination and so on (15b).
Nowadays, some people who take the Buddha's words out of context and make it display of meditation, meditate by concentrating on what appears before their visual perception, but Asaiiga has stated very clearly that concentration does not take place in sensory perception but in categorical perception, and the objective reference is not the visible object that is present in sensory perception, but its precept.

Now if you think that the object of intense concentration must necessarily be a real object, this is not the case. You can concentrate on anything—be it a real or fictitious object. If you work on it intuitively, you get from it a pure and non-conceptualized vision. The nmn 'hrel (Prama)avarttika) states,

**Whether it is real or not,**
**Whatever becomes truly familiar**
**When you have become fully conversant with it**
**Results in a clear feeling of presence without subject-object dichotomy.**

The specific function of intense concentration is said to provide it basis for an awareness in which one has a state of mind settled in itself, (a mind) taking every individual aspect of the perceptual situation as it is and never occurring in a vacuuum, even though attention may shift within this perception (from one aspect to another).-"

The spyod-'jug (Bodhicaryavatara, VIII, 4) states,

**From having known that the charges of emotions are overcome**
**Through a widened perspective which is together with calm (16a),**
**One must first become calm, and this comes When one is not attached to the world.**

The 'did ha lung (Vinavasastra) states,
Such statements are made over and over again. Therefore, those who want to have liberation must take these works as the Sublime Instruction.

Appreciative discrimination [shes-rab]

The ningou-pa kun-las-hats (A1lidhrnar asa nuccava, p. 6) explains the nature of appreciative discrimination as follows:

What is appreciative discrimination:’ It is the distinction of all that which is firmly established. Its function is to avoid any confusion or doubt.

It is an awareness which discriminates between the individual observable qualities and defects as well as between the qualities of what is under consideration. The object which has been singled out by appreciative discrimination is threefold:

1. Positive
2. Negative
3. Indeterminate

and the individual defects and qualities of these are distinguished.

There are four logical procedures by which the individual defects and qualities are distinguished:

1. Awareness of what must be clone
2. Awareness of relationship
3. Awareness of attaining proper validity
4. Awareness of the absolute real

Since doubt is dispelled when certainty is attained through an investigation which derives from these four operations, the specific function of discriminative awareness is said to abolish doubt.

In cogitating their respective significance, Tsong-kha-pa states (in the lam-rim (lues-nice),

May the investigating mind which 〈16b〉
Arises from thinking, day and night, about

What is before the mind, dispel doubt after
Singling out the significance of what has been heard
By means of the four operations.

The reason that the five mental events beginning with intention are here called ‘object-determining’ is that these mental events have each grasped the specification of the object. When they are steady, there is certainty concerning each object.

The Eleven Positive Mental Events [dge-ba bcu-gcig]14

The third, the eleven positive mental events are:

1. Confidence-trust [dad-pa]
2. Self-respect [ngo-tsha]
3. Decorum [khrel-yod-pa]
4. Non-attachment [ma shags-pa]
5. Non-hatred [zhe-sdang med-pa]
6. Non-deludedness [gti-mug med-pa]
7. Diligence [brtson-'grus]
8. Alertness [shin-tu sbyangs-pa]

9. Concern [bag yod]

10. Equanimity [btang-snyonis]

11. Non-violence [nam-par-mi-'tshe-ha]

Confidence-trust [dad-pal]

The ningon-pa kun-btu.s (Abhidharmasangyācaya, p. 6) explains the nature of confidence-trust as follows:

“What is confidence-trust? It is a deep conviction, lucidity, and longing for those things which are real, have value, and are possible. It functions as the basis of sustained interest.

It is an awareness that counteracts lack of trust through three aspects of trust, namely, deep conviction, lucidity, and longing trust.

Confidence-trust is of three kinds:

1. Lucid confidence [dang-ba'i dad-pa]

2. Trusting confidence [yid ches gvi dad-pal]

3. Longing confidence [mngon 'dod gyi dad-pa]

Lucid confidence is a lucid mind. It is an attitude that comes when one has seen the worth of such valuables as the Three Jewels (Buddha, Dharma and Sangha). (17a). When one puts it water-purifying gem into murky water, it becomes limpid immediately. So when this confidence is born, the turbidities of the mind become limpid and all the values of real understanding can grow in one.

Trusting confidence is trust which arises from thinking about the connection that exists between ones action and its result as taught by the Buddha.
Longing confidence is the thought that, having pondered over the four truths, those of frustration and of its origin have to be given up, and those of the cessation and of the way to it have certainly to be realized. When we know that through our efforts these truths can be realized, we certainly will do so.

Here we have only touched upon the nature of the three kinds of confidence-trust, but they are not exhausted thereby.

At present, people lump pleasure and confidence-trust together. We may say that the pleasure in drinking wine is trust in the wine, but the pleasure and trust certainly are not one and the same. Trust is a mental event which is essentially positive, but pleasure shares in what is positive and negative.

Moreover, in explaining these two in greater detail, we have four alternatives:

1. Liking something but not trusting
2. Trusting but not liking
3. Both
4. Neither

The first, 'liking something but not trusting': you may like your son and wife (but not trust them), and you may like such activities as drinking wine and eating food at inappropriate times (17b).

The second, 'trusting but not liking': you may have a strong conviction from a deep fear of the evils of sagisura (and hence not like it).

Both liking and trusting is joyful trust that comes from a deep conviction after having pondered over the positive results deriving from positive actions and (from having pondered) on the value of spiritual friends.
Neither liking nor trusting is like anger and frustration.

Now then, are pleasures and personal feelings the same or different? We can say in some sense they are one and the same but actually they are not. To like a spiritual friend is it trust, but the personal feeling of respect regarding that spiritual friend is it distinct mental event which is produced in one's being. It is to feel humble and to cherish this feeling by thinking of what he has done for you. And these are two different mental events.

When someone in his individual awareness deeply questions this according to the great treatise [lum-rim], and when he analyzes how it grows in him when he turns the mind inward, then he can know what is meant. Mere words cannot explain this.

In view of this topic, the all-knowing (Tsong-kha-pa) has repeatedly stated that in order to experience this from the bottom of one's being, one has to associate with wise spiritual friends and become very familiar with what the teachings have to say. But, when these great treatises are explained, today's fools, poor in intelligence and low in their stock of merits, become frightened (18a) and turn away from them like a poisonous snake catching the smell of musk or like a small child running away upon seeing the surging ocean. Those who realize the works of the Sages and sublime persons of India as the very foundation of instructions are like stars in daytime.

The statement that the function of trust is to provide it basis for (sustained) interest means that the basis of all (positive) qualities is endeavor, and that for the birth of endeavor an interest which is involved with the problem is necessary. For the birth of such interest, there must be the vision of its qualities and it trusting confidence in all teachings and their commentaries; thus, confidence-trust has been said to be the foundation of all qualities.

So also, the dkon nu•hog to la'i gz.ungs (Katnolkanama-
dharani) states,

Confidence must precede all things like a mother (her child). It guards and increases all positive things. It removes fears and rescues from the (four) rivers. Confidence is the road sign to the citadel of happiness.

371 11c four rivers or four floods are: flood of sensuality, flood of existence, flood of opinion, and flood of unknowing. See :1 bhidharnatkosa, V, :37.

Confidence is not murky and makes the mind translucent. It removes arrogance and becomes the root of devotion. Confidence is wealth, treasure, and the best foundation. Like the hand, it is the means for gathering what is wholesome.

And the rhos pa says,

Wherever one may arrive at by being led, Confidence is the best vehicle. Therefore, the intelligent person Sticks close to confidence.

In people without confidence, Positive qualities are not produced. Just as a seed consumed by fire Cannot become a green sprout.

Thus, it has been stated that all bright qualities come in the wake of confidence-trust, and so the statement. 'where the root of Confidence is made firm', in the hslah btus (Siksasatlucava) explains that confidence-trust is the foundation of all the paths. The great personality and teacher Nagarjuna also states in the byang ('huh lain gyi riot pa's table of content,

The root is the development of confidence. The root of everything happy is this trusting confidence.

Self-respect [ngo-tsha shes-pa]
The ntngon-pa kun-btus (Abhidharmasamuccaya, p. 6) explains self-respect as follows:

What is self-respect? It is to avoid what is objectionable as far as I see it and its function is to provide a basis for refraining from evil behavior. It is to refrain from what is objectionable by having made oneself the norm.

Decorum [khrel yod-pa]

The mngon-pa kun-Wits (Abhidhannasamuccaya, p. 6) explains decorum as follows:

What is decorum? It is to avoid what is objectionable in the eyes of others and has the function of doing just that. It is an avoidance of evil action from making others the norm.

The difference between self-respect and decorum is that, despite their similarity in avoiding evil actions, when the chance of doing evil actions is close at hand, self-respect means to refrain from evil actions in view of the consideration, "This is no part of mine." Decorum means to refrain from evil action by having made others the norm in view of the consideration, "It is not appropriate to do so because others will despise inc." (19a) The primary realm of restraint is the fear that one's guru and teacher and other people deserving respect would be annoyed.

The statement that the function of self-respect and decorum is the basis for refraining from evil action properly emphasizes the necessity of these two in refraining from evil action by body, speech and mind, because if self-respect and decorum are not there, one is incapable of restraining any evil action. If there is no fear about the result that might come from one's own action and no fear that the guru, teacher, and others deserving respect would be annoyed, there is no chance that evil
behavior will ever stop.

**Non-attachment** [ma chaps-pa]

The inn gun-pa kun-HTus (Abhidhar►nasainuccava, p. 6) explains non-attachment as follows:

What is non-attachment? It is not to be attached to a mode of life and all that is involved with it. It functions in providing the basis for not being caught up in evil action.

It is an awareness in which there is no discontentment and no attachment.

**Non-hatred** [zhe-sdang med-pa]

The ngton-pa kun-btus (Abhidharntasamuc(-ava, p. 6) explains non-hatred as follows:

What is non-hatred? It is the absence of the intention to torment sentient beings, to quarrel with frustrating situations, and to inflict suffering on those who are the cause of frustration. It functions in providing it basis of not getting involved with evil behavior.

It is an awareness in which there is no intention to inflict suffering since, in view of any one of the three possibilities by which I can become an object of hatred, the rise of hatred has been crushed.

**Non-deludedness** [gti-mug med-pa]

The nmgon-pa kun-Nits (Ahhidh armasamuccava, p. 6) explains non-deludedness as follows:

What is non-deludedness? (191)) It is a thorough comprehension of (practical) knowledge that comes from maturation, instructions, thinking and understanding, and its function is to provide a basis for not becoming involved in evil behavior.

*It is it distinct discriminatory awareness to counteract the*
deludedness that has its cause in either what one has been born into or what one has acquired. 1e

These three last mentioned mental events—non-attachment, non-hatred, and non-deludedness—are the root of everything positive and the means of ending all evil behavior. They are like the very heart of all paths. Since they are there for getting rid of the three poisons and their tendencies on all levels and paths and for becoming disgusted with each of the three poisons which are the cause of evil action, it has been said that they function as providing a basis for properly refraining from evil forms of behavior.

The divisions (one can make) are infinite, but broadly speaking, all the levels and paths come together in these three.

To understand non-attachment as turning one's mind from this life so as not to be attached to it, but still looking forward to a future life, is the attitude of inferior persons. To turn away from desire in being unattached to all the good things of life is the attitude of a mediocre man. To be non-attached to both samsara and nirvana, but to look forward to it non-localized nirvana, is an attitude of a superior man. To explain it this way is only a hint to those who have an inquiring mind—because how is it possible to explain here everything that is necessary? K20a) The same argument applies to non-hatred and nondeludedness.

In this context, non-deludedness is a distinct discriminative awareness. In the above statement about what one has obtained by birth and what one has acquired, the former comes from the maturation of that which one has clone in previous life, not by the conditions of this life. Therefore, one speaks of what comes from maturation. What one has acquired is that which comes through listening, thinking, and contemplating.

The basis of what one has to listen to with it discriminative awareness derived from studying are the
Buddha's teachings and the commentaries. The teachings have twelve divisions:

1. sfitra
2. geva
3. wakarana
4. gathd
5. n(d)dana
6. nidana
7. avadana
8. itivrittaka
9. jataka
10. vaipulva
11. abdhfitadharnia
12. upadesa

Since a detailed explanation of their specific function and which of these is the most important would take many words, it will be omitted here.

These twelve divisions can be condensed into nine according to the master Candrakirti. Ile considers the four up to nitlunu as one.

The nine again (201) can be condensed into three groups:

1. sutrapitaka
2. vinayapitaka
3. abhidharmapitaka
The main content of these three baskets are the three trainings. The main content of the sutrapitaka is the training in mental integration, that of the vinayapitaka is the training in discipline, and that of the abhidharmapitaka is the training of one's critical capacity.

Just as it has been said repeatedly, the nngon-pa kun-btus (Abhidharmasamuccaya) states that the sutrapitaka deals equally with the three trainings, the vinayapitaka explains both discipline and mental integration, and the training of one's critical cognition is explained by the abhidharmuipitaka. The purpose of this rendering is that when one preserves by proper inspection and knowledge [dran-shes] the basic and subsidiary rules of the vinaya, this facet becomes the best means for the growth of same dhi (integration) because it has the power to end, once and for all, elation and despondency. Today, there are very few who understand this gradation of the path.

Thus, certainty is produced by striving to hear many times the expositions of the three trainings which are the foundations of what is to be studied, and by investigating, over and over again, the meaning of what has been heard by means of the four methods of critical investigation.:38

Since it is affirmed by the great charioteers that a thorough experience of the path in its totality is accomplished by thinking about it and by settling on the content of this certainty that has come from thinking about it, it stands to reason that intelligent people (21a) will set out on a path in which the Buddhas delight. But those who give up learning which is the real course of a distinctive discriminating awareness are like sheep following blind fools and idiots. Boasting, without ever having thought, and merely preserving their titter laziness, they think that they now have a noble mind, that they have fulfilled a religious life, and that they have spiritual attainments. They merely waste the unique occasion that they have as human beings. Worse than this are those who hold themselves to be superior even when people in the same
situation perish and the (Buddha's) teaching declines. These people had better concern themselves with this discriminative appreciation which we have just discussed above. The nulo stlud-pa (Prajñaparamita- sāmpcavagatha, fol. 111)) states,

How will millions of millions of blind men Ever enter a city without knowing the road to it? Without appreciative discrimination, the other five perfections are blind. Therefore, without this appreciative discrimination (the blind man's guide), Enlightenment cannot be attained. When one is taken hold of by appreciative discrimination, He regains his sight and is called the Enlightened One.

And also, the honorable Maitreya says,

Any preconceived idea regarding the gift, the giver, and the receiver\footnote{\textsuperscript{39}} Is considered to be a mental obscurcation. Any preconceived idea regarding avarice Is an emotional obscurcation.

\textsuperscript{"} Li. V. Guenther, Jewel Ornament of Liberation, p. 110, it. 22.

Everything but appreciative discrimination must be given up. Therefore, discrimination is the highest (value). And since its basis is learning, Learning is the highest (value). (21b)

And Asvaghosa says,

Knowing little, the blind men do not know how to bring contemplation to life. Because they lack that, they cannot think of anything.

Therefore, by bringing contemplation to life by continually thinking about the basis of Striving towards learning, appreciative discrimination will increase.
And Vasuhandhu says,

**He who is disciplined and possesses learning**  
**Will practice the way of bringing contemplation to life.**

Thus has it been stated over and over again in the Sutras and commentaries.

Diligence [brtson- [brtson-

The ningon-pa kun-btus (Abhidharmasamuccaya, p. 6) explains diligence as follows:

What is diligence? It is the mind intent on being ever active, devoted, unshaken, not turning hack and being indefatigable. It perfects and realizes what is conducive to the positive.

The mind ever intent on the wholesome is diligence. Therefore, Vasuhandhu says,

What is diligence? It is the antidote against indolence and is that which makes the mind move out towards the positive.

And the spyod-'jug (Bodhicaryavatara, VII, 2) states,

What is diligence? It is the inclination towards the wholesome.

Nowadays, in society, there are those who claim that every endeavor is it case of diligence, but striving for this life here is not diligence. Diligence means going out to the positive, but the attempt to shun what one must do in this life means to cling to evils contrary to diligence. (22a)

In classifying diligence, the hyang-chub lam-ring ehen-mo gives three:

1. Diligence which is ever ready
2. Diligence which collects wholesome things
3. Diligence done for the sake of sentient beings

But the nutgon-pa kun-las-btus (Ahhidharmasamuccava, p. 6) explains five:

1. Diligence which is ever ready
2. Diligence which is applied work
3. Diligence which is not to lose heart
4. Diligence which does not turn back
5. Diligence which is never satisfied

The first is to put on the heavy armor in view of the fact that, before one embarks on positive action, the mind must first be made to go out in that direction. Regarding that, the phar ph yin bsdus-pa (Paramitasamasanama) states:

If one, indefatigably, with a mind bent on the wholesome,
Is compelled to act properly as regards to oneself and others
In a manner which is likened to the one-pointedness of mind
Of the Supreme Enlightenment whose vastness is
like the ocean which is
Made up of infinite numbers of water drops, and
If determination is of long duration in the manner that a year
Consists of the coming together of those days and nights
Of a great expanse in which a day and a night
Is likened to the termination and equanimity of the
Endless rounds of birth, then he will attain

The Supreme Enlightenment which is ever active.
When the mind, having been released from the frustrations of
One’s round of samsāra, becomes ever active,
Immovable and infinite, that (mind) becomes possessed of
The capacity towards the wholesome which is a brave mode of action,
And is said to be the first of the pure things to be grasped.

The second ('diligence which is applied work') (221)) is
twofold:

1. Steady engagement

2. Enthusiastic engagement

when by application the mind goes out to wake it real experience.

The third ('diligence which does not lose heart') is to develop this outgoing of the mind without weakening it by thinking, "How is this possible by me?" It is just as the ski/es rah (Jatakamala) states:

To be released on account of faintheartedness is useless. Therefore, don’t be afflicted by misery. But rely on a knowledgeable person who has gained the meaning of the teaching. Then even the most difficult will be easily attained.

Therefore, one should not be afraid nor be unhappy. To do what is necessary, but as circumstances should warrant,

He should be encouraged by the splendor of the Wise And go out to attain all those (positive) values.

The fourth ('diligence which does not turn back') is to make the mind go to its limit without letting it ever be changed by conditions. Regarding this, the venerable teacher (Tsong kha pa) says,

When diligence which does not turn back wears its armor,
The virtue of intuitive understanding increases like the crescent moon.

All activities of experiencing the path become meaningful, and Whatever is begun will result in the manner that one wishes.
From understanding it thus, the Sons of the Victorious One
Begin with diligence, the big wave which sweeps away
all indolence.

The fifth (‘diligence which is never satisfied) is an
effort to seek more than the previous and not to be
collected with just a little. Moreover, to take it small
portion of the path as the most important one (23a) and to
reject all others is it great hindrance to implanting the
inclinations regarding the path in total: therefore, it is very
important to have a clear understanding of the entire path.
The lops-rim then-nun states:

Arva Asafiga had stated over and over again that even if
one knows properly the way of how to strive after the wide
and great, it is very important to have two dualities: 1. one
twist not despair, and 2. one must not be satisfied with
merely some triviality. To think that it great portion of the
path is established if only one aspect of it arises, whether it
be an apparent duality or the real quality, and to be content
with attending to it habitually, even though it has been
taken from the teachings and represents logical forms to
those who know the essence of the path-this may be
acceptable as part of virtue. But to understand that one
cannot proceed anywhere by that alone, to leave despair
behind, to seek indefatigably the specific positive value of
it higher level with it total conunitnent, and to learn
whatever one twist learn without ever failing in ones
efforts-this is indeed it wonderful thing.

That this activity is said to function as the realization
and completion of all positive values means that all
positive values depend on diligence. Therefore, (23h) the
Ihug bsam h.skul-ha (Adhy~isayasa l codanasutra) states:

What is to be done in this world, and
What is to be done in the world beyond,
Is not difficult for one who exerts diligence. 
The positive values of the wise result through 
the power of diligence.

Those who have entered the Enlightenment of the Buddha, 
Having seen the detriment that comes from indolence and 
sleepiness, 
Always make diligence the basis of endeavor. 
This I have always told them to do.

And the indo sde'i rgyan (Mahayanasutralamkara, XVI, 
65-66) states:

Of the positive values, diligence is supreme. 
Therefore, he who relies on this truly attains the real. 
By diligence, one instantly gains the sublime states 
Of the mundane and transcendental.

By diligence one attains the desired mode of life. 
By diligence one also becomes transformed. 
By diligence one becomes free by standing above 
worldly things. 
By diligence the Supreme Enlightenment unfolds completely.

Since all positive qualities come in the wake of 
diligence, it is very important to initiate assiduous striving. 
When one deeply studies and knows the works that have 
been mentioned before, there are very effective means of 
initiating diligence. For people with low intelligence like 
myself, it is difficult to understand these things merely by 
dealing with these works. Although Tsong-kha-pa has 
stated in his lam-rim,

It is very important to know the way to end idleness 
which is not conducive to diligence in view of the profit 
that comes from making it beginning of assiduous striving 
and the disaster that comes (24a) from not doing it. It is 
important to know how to realize the powers of 1. active 
implementation of devoted interest, 2. active 
implementation of steadfastness, 3. active implementation
of joy, and 4. active implementation of rejection.

Since I cannot put down everything in writing here, one can learn them by looking up the BodhicaryntcaTira and the lamrim chen-mo.

Alertness [shin-sbyangs]

The mngon-pa kun-htus (Abhidharmasamuccava, p. 6) explains alertness as follows:

What is alertness? It is the pliability of body and mind in order to interrupt the continuity of the feeling of sluggishness in body and mind. Its function is to do away with all obscurations.

Alertness is an awareness in which the mind is made to serve the positive as a docile servant serves his master. It interrupts the continuity of the feeling of sluggishness in body and mind.

Alertness is twofold:

1. Physical alertness

2. Mental alertness

Physical alertness means that when through the power of concentration the sluggishness of the body, which does not allow one to do anything, has been overcome, one feels light like cotton floating in the air and the body can be made to work towards any positive value one wishes. Mental alertness means that when through the power of concentration, mental sluggishness has been removed, the mind moves on towards its object without friction and can operate smoothly. It is as the venerable teacher (Tsong-kha-pa) states,
Concentration is the king that rules the mind.
When he is seated, he is immovable like Mount Meru. (24b)
If he travels, he goes to all positive values
And brings about great happiness which consists in the pliability of body and mind.

4' hsom-gtan, to let one's intention settle firmly on a certain topic. It is a state in which all discrimination is gone and only integration remains.

The statement here that its function is to do away with all obscurations means that, through the power of alertness, sluggishness of body and mind is cleansed, and, when one has alertness, one is drawn towards integration from within. This integration through its mere spreading increases the feeling of pleasure, and by its mere increase, integration becomes ever more intense, and so one becomes powerful to do away with all obscurations.

Concern [bag yod]

The nutgon-pa kun-btus (Abhidharmasannuccaya, p. 6) explains concern as follows:

*What is concern? From taking its stand on non-attachment, non-hatred, and non-deh门dedness coupled with diligence, it considers whatever is positive and protects the mind against things which cannot satisfy. Its function is to make complete and to realize all worldly and transworldly excellences.*

It is intelligence which realizes the positive and protects the mind from what is unreliable by persevering in diligence and not falling prey to the emotions.

According to the htlang sa (Bodhisattvabhuní), there are five kinds:

1. Concern with regard to things in the past
2. Concern with regard to things in the future
3. Concern with regard to things in the present

4. Concern with regard to things which were to be done before

5. Concern with regard to things which continue together with what is done now

They have been explained by Tsong-kha-pa as follows:

To get rid of the evil done in the past by means of the teaching (25a).
And in the future to think of doing what is positive, and, in the same way,
In the present to do acts without being absent-minded,
And to carry oneself in such a way that evil will not rise,
And to gain control over oneself in thinking that all this is possible,
Then, in view of the above facets, one acts appropriately.

Since it has been said that its function is to provide a basis for letting the worldly and transworldly excellences all be present, it is very important as the basis of all of the levels and paths. In the same way, Nagarjuna (Suhrllekha 13) states,

The Buddha has stated, "Concern is the basis of immortality, Negligence is the state of death." Therefore, In order for you to increase the wholesome, Always be concerned and be so devotedly.

Equanimity [btang-snyoms]

The nntgon-pa knn-btos (Abhidharmasamuccava, p. 6) explains equanimity as follows:

What is equanimity? It is it mind which abides in the state of non-attachment, non-hatred, and non-deludedness coupled with assiduousness. It is quite dissimilar to it state that gives rise to emotional instability. It is it state where mind remains what it is—a state of being calm and it
spontaneous presence of mind. Its function is not to provide occasions for emotional instability.

Equanimity means to make the mind fully concentrated on its objective reference by relying on means and techniques internally (25h) and to generate the nine phases in the process assuring stability of mind gradually. When the nine phases in this process have been completed, one need not seek for counteragents of elation or depression-the mind is there spontaneously as what it is.

In general, equanimity is threefold:

1. Motivational equanimity
2. Feeling equanimity
3. Inmeasurable equanimity

The one under consideration here is motivational equanimity.

In the first phase of this stabilizing process, one has to know thoroughly the methods which set the mind on its object and then, how its state with this object deepens after one uses what counteracts elation and depression, how to use these counteragents when this deepening takes place, how in the end one obtains full concentration in integration, and how to obtain this equanimity in between periods when one watches for elation or not. All this one can learn from the bi/ang-chub lam-gi/i rim-pa.

The statement that equanimity functions as not providing occasions for instability means that when these nine phases of the process assuring stability of mind have been completed, it is easy to turn back the manifest emotions which belong to the world of desires. In particular, when composure sets in, elation or depression do not come about.

Non-violence [rnam-par mi 'tshe]
The ninfon-pa kun-btus (Abhidharmasanwecava, p. 6) explains non-violence as follows:

What is non-violence? It is an attitude of loving kindness belonging to non-hatred. Its function is not to be malicious.

Non-violence is patient acceptance which expresses itself in the sentiment of how wonderful it would be if suffering sentient beings could be released from all their frustrations. Patient acceptance is an attitude not marred by the slightest idea of inflicting suffering (26a).

This non-violence and the rejection of harming others is the central idea of the Buddha's teaching. It has been explained as follows (in the rinat/a):

True patient acceptance—patient acceptance difficult to attain—
Has been said to be real nirvāṇa by the Buddha.
A monk who harms another and who acts violently Towards another is not a religious person.

To fulfill the rinat/a, it is necessary to carry about a water strainer in order to avoid harming life in water. Since a person who does not carry it water strainer is one who goes against loving kindness taught by the Buddha, he must be uprooted from his foundation of harming another and be earnestly advised of the need to actualize the four attitudes by which one becomes an ascetic, namely,

1. Even if one is reviled, he should not revile in return.

2. Even if one is angered, he should not retaliate with anger.

3. Even if one is struck, he should not strike back.

4. Even if someone pries into one's affair, he should not pry into someone else's affair.
Therefore, when those who have insight truly understand these four attitudes, they will necessarily conclude that the renunciation of violence is the quintessence of the teaching.

In case one should think that this is all there is to these eleven positive factors, one should know that the eleven, beginning with confidence-trust, are said to be wholesome by their very nature in view of the fivefold classification of the positive:

1. Wholesome by its very nature
2. Wholesome by being related
3. Wholesome by being related to that which follows
4. Wholesome by inspiring
5. Wholesome in the ultimate sense

They are spoken of in this way because they originate as the wholesome by just being there, independent of other factors such as causative circumstances. (26b) Therefore, it is in this context that they are explained as the eleven primary positive factors.

That which is known as 'wholesome by being related' are the mind and mental events that are associated to each other by means of the five functional co-relations which operate at the level of the eleven positive factors beginning with confidence-trust.

That which is known as 'wholesome by being related to what follows' are those experientially initiated potentialities of experience which are wholesome.

That which is known as 'wholesome by inspiring' are actions of body, speech and mind that have been initiated through confidence.

That which is known as 'wholesome in the ultimate
sense' is called the absolute. One labels this positive because, when one meditates on the absolute, all obscurations are removed—but it is not a concrete positive."

These positive factors that have been explained can be divided according to the occasion in which they occur:

1. Wholesome by being inborn
2. Wholesome by means of involvement
3. Wholesome by what has been done
4. Wholesome by being involved with benefiting
5. Wholesome by leaving out nothing
6. Wholesome by being a counteragent
7. Wholesome by being in a state of rest
8. Wholesome by being similar to the cause

'Wholesome by being inborn', to give an example, is confidence-trust which has been set up by the latent potentialities that have come from a previous life independent of what one does about it in this life.

'Wholesome by means of involvement', for example, is the desire to become a Buddha by relying on the four conditions:

1. To rely on spiritual friends in this life
2. To listen to the teaching of the Buddha
3. To pay proper attention
4. To realize what is conducive to the attainment of nirnnt

'Wholesome by what has been done', for instance (27a),
is to pay one's respect to deserving persons.

'Wholesome by being involved with benefiting', for instance, is an activity through which sentient beings reach maturity by four essentials:

1. Charity
2. Speaking kindly
3. Acting in such a way that others benefit
4. Sharing

'Wholesome by leaving out nothing', for instance, are special bright pure actions that make one attain heaven or the good things in life.

'Wholesome by being a counteragent', for instance, is the wholesome action that has special power of overcoming thoroughly all that is not conducive to the positive and all that has to be given up.

'Wholesome by being in a state of rest', for instance, is the truth of cessation (of frustrations) as indicated by the following verse:

*When one becomes separated from cupidity-attachment*
*And has overcome evil actions by positive acts,*
*He becomes immediately adorned with the Supreme*
*And this is called 'having come to rest'.*

'Wholesome by being similar to the cause' means the five higher kinds of insight that come with the attainment of the [truth of cessation (of frustrations) and the ten powers (of a Buddha)](#).15

There is no foundation for considering the wholesome things as entities.

Unwholesome factors are explained in the same manner as being fivefold:
1. Unwholesome by its very nature

2. Unwholesome by being related

3. Unwholesome by being related to that which follows

4. Unwholesome by inspiring

5. Unwholesome in the ultimate sense

The first is, in general, the basic and proximate factors of (emotional) instability.

The second is the mind and mental events which are simultaneous and on the same level as those (unstable) emotions.

The third are the experientially initiated potentialities of experience which are negative.

The fourth are the activities of body and speech initiated by those (unstable) emotions. (27b)

The fifth is all that is summarized by samsara. Insofar as these are considered to be the situation of the mortals by those who will become elevated, they are said to be unwholesome in the ultimate sense, but there is nothing to establish that everything in saṃsāra is concretely an unwholesome thing.

Accordingly, the need to distinguish these unwholesome factors as to their actual and postulated particularities seems to be very important. These unwholesome factors can be divided according to their circumstances:

1. Unwholesome by being inborn

2. Unwholesome by means of involvement

3. Unwholesome by what has been done
4. Unwholesome by harming

5. Unwholesome by leaving out nothing

6. Unwholesome by things not conducive to good things

7. Unwholesome by being destructive

`Unwholesome by being inborn' is exemplified by the impulse to kill, which comes through tendencies implanted in a previous life. There may be a point in making a distinction between the actual act and intention, but even though young people nowadays do not consider this division between good and evil as something very important, it is stated that when one practices the stages as indicated in the ht1ang-chub lane-ring it is very important to make this distinction. Hence, without quibbling about words, (28a) one must turn the mind inward and think about it.

`Unwholesome by means of involvement' is, for instance, evil behavior which comes from associating with evil friends, listening to religious freaks, and indulging in sloppy thinking.

`Unwholesome by what has been done' is, for instance, making bloody sacrifices to idols by following those who have been deceived by evil friends in the belief that harming is a religious activity.

`Unwholesome by harming' is, for instance, to harm sentient beings by body, speech and mind.

`Unwholesome by leaving out nothing' is, for instance, activity which sets out on a course and makes certain that there is nothing left but to bestow only painful results.

`Unwholesome by things not conducive to good things' are, for instance, the evil views that obstruct the birth of a path which does not collapse.
'Unwholesome by being destructive' are, for instance, those evil views that destroy everything conducive to that which is wholesome.

'Indeterminate' also covers the range from what is indeterminate in itself to what is indeterminate by being similar to its cause. Moreover, in the positive and negative, there is that which seems to be positive but is not and that which seems to be negative but is not; however, it would be going too far to put it all down here. If you wish to know it thoroughly, then look them up in the Abhidharma texts.

A dictum:

How foolish is the person who indulges in meaningless activities
And fatigues himself like one who sifts the grain from the chaff (28b)
When he rejects the seven jewels⑥ which grant all superior things in this life and the next
After he has obtained or met them.

16 The seven jewels are: gold, silver, pearl, crystal, beryl, diamond, and coral.

The eye of intelligence which distinguishes the path from that which is not
Is blinded by the foul waters of the fools and idiots.

To claim that one can walk the path and scale the spiritual levels by using an artificial staff
That resembles the dharma is too ridiculous for words.

Oh friends with intelligence and sustained interest,
If you want to search for the jewel that elevates your mind to the two positive qualities,
Then follow Tsong-kha-pa, the supreme Bodhisattva, and Dive deep into the ocean of the Buddha's words which is like a Wish-fulfilling Gem.
These few lines are meant to summarize what has been said so far.

**Six Basic Emotions [rtsa-nyon drug].**

The basic emotions are those emotionally tainted mental events, namely,

1. Cupidity-attachment ['dod-chags]
2. Anger [khong-khrol]
3. Arrogance [nga-rgyal]
4. Lack of intrinsic awareness [ma-rig-pa]
5. Indecision [the-tshoms]
6. Opinionatedness [ita-bal]

The defining characteristic of emotions in general has been explained in the inngao-pa kun-btus (Abhidharmasantuccava, p. 43) as follows:

Whenever something occurs, the characteristic of being restless will be present. When that happens, the existential state of the mind will be restless. This is the characteristic of emotions.

An emotion is an ego-centered attitude which makes the mind restless when something occurs.

**Cupidity-attachment ['dod-chags]**

Taking each emotion individually, the ningon-pa kun-btus (:lbhitlharntasanu►ccaya, p. 7) explains cupidity-attachment as follows:

*What is cupidity-attachment? It is the hankering after things ranging over the three levels of existence,* and its function is to produce frustrations.
Cupidity-attachment is a mental event which is obsessed with anything by seeing it as being pleasant from its own point of view.

Isere, the all knowing master (Tsong-kha-pa) says, (29a)

Cupidity-attachment is a hankering after any pleasurable external or internal object by taking it as pleasing to oneself. For example, just as it is difficult to remove oil stain from it cotton cloth, in the same way, this hankering after and getting more and more involved with the thing makes it very difficult to get rid of.

Cupidity-attachment is threefold:

1. Cupidity-attachment on the sensuous level

2. Cupidity-attachment on the aesthetic level

3. Cupidity-attachment on the non-formulated level

The ningon-pa nuhod (Abhidharmakosa) explains it as attachment to sensuousness and attachment to possible existences and speaks about the latter by combining the two higher levels into one.

Cupidity-attachment on the sensuous level is sustained interest in and attachment to the five desirable qualities such as color-form, sound, etc.

The combination of the two higher levels into one and calling it 'attachment to possible existence' is for the sake of removing the error that the experiences taking place on the level of aesthetic forms and on the level of formlessness are the path to liberation.

The statement, `its function is to produce frustrations' means that, since the foundation of all frustrations of soni.snra on the three levels of existence is the whole process of being reborn into saipsiira, the chief cause of the process of sa1psiira is nothing more than the desire for
Anger [khong-khro]

The ningon-pa kun-btus (Abhidharmasamuccaya, p. 7) explains anger as follows:

What is anger? It is a vindictive attitude towards sentient beings, towards frustration, and towards that which gives rise to one's frustrations. Its function is to serve as its basis for faultfinding and for never finding even a moment of happiness.

Anger is a vindictive attitude which is unable to accept the three situations that may give rise to anger and which inflicts suffering on the three situations.

The three situations of anger are sentient beings, one's personal frustrations, and the situation from which these frustrations come.

The reason for saying that the foundation of a vindictive attitude is ninefold is in accordance with the rin-c'la'n 'plirc'ng (Ratnamala) which says,

**The vindictive mind comes from nine causes**

*Which are vindictiveness towards one’s self, One’s friends, and one’s enemy in the three Aspects of time*\(^{49}\) *and other unfounded fears.*

The three aspects of time are, the present, the future, and the past.

I the lain-rim states,

Anger is to feel vindictive about sentient beings, frustration, and such things that annoy one such as weapons and thorns. It is a fierce mind which is intent on getting even with all of this.

Anger sloes not allow one to settle on the pleasures of
this life and produces immeasurable frustrations in the next life. Thus, the spyod-'jug (Bo dhicarvavatara, VI, 3-5) states, (30a)

When one is mentally feverish with hate,
The mind cannot experience peace.
In not being able to gain either happiness or joy
One will lose sleep and become very unsteady.

He who with whatever wealth or honor
Does kindness will become steadfast.
They are the assailants who slay
That tyrant ruler, hatred.

By anger friends are made weary, and even if one attracts
Them by gifts, they cannot be made to stay.
In short, anger does not offer one
The slightest chance to be happy.

The skt/es-rubs (Jatakamala) states,

If one’s face is distorted by the fire of anger,
Even ornaments will not make it look beautiful.
Even if one goes to sleep on a comfortable bed,
The mind burning with anger will be miserable.

He forgets what good was done for him,
And being afflicted by anger he goes evil ways.
He fails in fame and achievements
And even his prosperity dwindles like the waning moon.

Even if he is supported by friends, the angry person
Will fall into ways not suited to being a human.
While only thinking about “How can I get something” or
“How can I harm someone,” his intelligence collapses and,
Generally, he violates the moral norm and becomes more and
more infatuated.
When through anger he has become accustomed to do evil acts, 
He will for one hundred years suffer evil forms of life. 
Even an enemy who is after the evil-doer 
Could not be worse than this! (30b)

Arrogance [nga-rgyal]

The ntngon-pa kun-htus (Abhidharmasamuccaya, p. 7) 
explains arrogance as follows:

What is arrogance? It is an inflated mind as to what is 
perishable and its function is to serve as the basis for 
disrespect and frustrations.

Arrogance is a mental event which is a kind of inflated 
mind making whatever is suitable, such as wealth or 
learning, to be the foundation of pride. Here the lam-rim 
states,

Arrogance bases itself on a nihilistic outlook and gets 
inflated about the high and low, the good and evil of the 
within and without, and assumes superiority.

The statement 'bases itself on it nihilistic outlook' is used 
because all forms of arrogance come simultaneously with 
the belief in oneself and an over-evaluation of oneself.

Arrogance is sevenfold:

1. Arrogance [nga-rgyal]
2. Excessive arrogance [lhag-pa'i nga-rgyal]
3. Pride of excessive arrogance [nga rgyal tits kyang 
   nga-rgyal]
4. Egoism [nga'o synam-pa'i nga-rgyal]
5. Arrogance of showing off [mngon-pa'i nga-rgyal I
6. Arrogance of thinking small [cung-zad snyam-pa'i 
   nga-rgyal]
7. Perverted arrogance [log-pa'i nga-rgyal]

The first is an inflated mind in which one thinks, "Look here, I am so superior compared to those low creatures."

Excessive arrogance is an inflated mind in which one thinks, "I am better than my peers."

Pride of excessive arrogance is an inflated mind in which one thinks, "I am more exalted than the other exalted ones."

Egoism is an inflated mind in which one thinks, "I am all of what makes up my existence."

Arrogance of showing off (31a) is an inflated mind in which one thinks, "I have achievements," even when one has attained nothing.

**Arrogance of thinking small is an inflated mind in which one thinks, "I am so small and inferior compared to those who are so exalted and so high."**

Perverted arrogance is to think that it is a virtue to make mistakes like someone who is so proud about his achievements when he is carried away by it goblin. It is just as the 'dt►l-bu lung (Vinavagambttaravis'esa-ganiaprasn►vrtti) states,

"To feel proud about what is actually a matter of shame is like feeling pride about what one has done to householders and goblins in one's attachment to honor and riches after one has failed and discarded all disciplinary rules.

While this exposition is according to the argon-pa nulaod (Abhidharmakosa), the rin-chen 'phrt'n';--I)a (Ratnamala) classifies arrogance as follows:
Arrogance is of seven kinds.
I shall explain them by distinguishing them.
Regarding them, the person who boasts openly
That he is equal to or greater than his equal
From having made the low low and
The equal either equal or lower,
Ought to be known as having arrogance of sameness.

He who is vile, yet venerates himself and
Boasts that he is particularly great
Thinking that he is truly ambitious by being lofty,
Has the pride of excessive arrogance.
He who boasts about those five meaningless things
Called ‘constituents of the personality’
Which are vicious like the coming into existence
Of pus pots, the sprouts of karma,
Is called an ‘egoist’.

When in fact he has not attained anything but thinks that
He has attained something, he is openly arrogant.
Praising the performance of evil actions is,
By the wise, (31b) understood as perverted arrogance.
To say, “I am useless,”
Is to belittle oneself.

This is known as arrogance of self-abasement.
This is to put it concisely.

'S► These are the same as the five psycho-physical
constituents but organized internally as the individual
personality.

Arrogance is the cause for being born into evil existence
in a later life and, even when one is born in a human
existence, it is the cause for being born in a low caste and
as a servant. Through disrespect to those who have
(virtuous) qualities, one spoils the opportunity of receiving
instructions and understanding them. Thus, arrogance
creates unpleasantness both here and in the hereafter. The
rin-elen 'phreng-ba (Ratnamala) states,
Inflatedness leads to an evil status,  
Jealousy leads to pale complexion,  
Anger to evil looks, and  
Lack of consultation with learned persons to stupidity—  
The result among human beings is,  
First of all, a hellish way of life.

The lam-rim states,
Since arrogance in this life is the greatest hindrance in the development of one's potentialities and in the next life is the cause for becoming a servant, it has to be given up.

Lack of intrinsic awareness [ma-rig-pa]

The nutgun-hut kin-blus (Abhidharmasamuccaya, p. 7) explains the lack of intrinsic awareness as follows:

Mhat is lack of intrinsic awareness? It is a lack of being aware to one's fullest capacity and it covers the three realms of life. Its function is to serve as it basis for mistaken stubbornness, doubt and emotionality about the entities of reality.

This unknowing is it mental event that is confused about reality as-it-is.

This lack of intrinsic awareness is a confusedness and it pervertedness. Regarding this state of confusedness, the Acarya Vasuhandhu, in his plnung-po bigu'i rub-In/ed (Pancaskan-dhaprakarana), is of the same opinion as and agrees with the statement of his brother, Asanga, in the kun-btus (Abhidharmasanniccaya). (32a) Dharmakirti, however, talks about pervertedness. Although lack of intrinsic awareness consists of two aspects-confusedness and pervertedness-all authors agree that the main counteragent is discriminative awareness which understands the fact that nothing has an abiding principle.

Lack of intrinsic awareness is twofold:

1. Confusedness about the relationship between one's action and its result

2. Confusedness about the ultimate

The former accumulates actions that will lead to rebirth in evil existences, and the latter accumulates actions that make its continue in happy existence.
The statement that its function is to serve as the basis for mistaken stubbornness, doubt and emotionality means that, on the basis of unknowing, all other emotions come into existence. On this basis actions are produced, and on the basis of these actions the misery and frustration of satpa-sura come about, so that all of the emotions and all evil depends on the lack of intrinsic awareness. So also, it is said in the roam ‘grel (Pramanavartika),

He who sees a self is
Constantly attached to this ego.
Through this attachment, he craves for happiness and
This craving conceals all defects.

And,

All evils derive from (32b) nihilistic views.
This is unknowing and from that comes cupidity-attachment.
And from that, anger and all the rest arise. By that alone
The cause of evil is explained as ‘deludedness’.

And,

Every instance of evil clings to the root of that (unknowing).
It is also a view concerned only with what cannot last.

The reverend teacher (Tsong-kha-pa) says,

The root of whatever one may gain in this world
Is unknowing. Having seen this, and (then)
Reversing the order is
Said to be dependent origination (pratityasamutpāda).

In brief, lack of intrinsic awareness is mentioned as the first member of the twelvefold chain of interdependent origination because it is the root of wandering about in satpa-sura and the foundation of all actions and emotions.

Indecision [the-tshoms]

The nuugon-pa kun-bias (Abhidharnuasamuccaya, p. 7)
explains indecision as follows:

What is indecision? It is to be in two minds about the truth, and its function is to serve as a basis for not becoming involved with positive things.

Indecision is the mental event in which one oscillates between two extremes concerning the four truths and the relationship between one's action and its result.

This indecision creates obstacles for everything positive and in particular for the vision of the truth. But if one sees the truth, indecision is overcome and one speaks of applying oneself to getting rid of those preconceptions which can he removed by seeing the truth.

**Opinionatedness ([lta-ba])**

Emotionally tainted opinionatedness is fivefold:

1. Opinionatedness regarding the perishable constituents ('jig-lta)
2. Opinionatedness regarding extremes [mthar-lta]
3. Clinging to ideologies [lta-lea mchog 'dzin]
4. Clinging to ideologies regarding ethical behavior and compulsive performance [tshul-khrims Bang zhugs mchog 'dzin]
5. Wrong opinion [log-lta]

The first, `opinionatedness about what is perishable', is explained in the ningon-pa kun-btus (Ahhidharmasamuccava, p. 7) as follows:

What is opinionatedness about what is perishable? (33a)
It is any acceptance, claim, opinion as dogma, fiction and opinion about the five psycho-physical constituents as a (eternal) self or as belonging to a self, and its function is to serve as it basis for all other views.
It is an emotionally tainted appreciation which is concerned with the five psycho-physical constituents as an 'I or 'mine'.

Such terms as 'acceptance' and so on in the kun-htus (Ahhidharn►asa►nuccava) are understood as follows:

Acceptance insofar as one is not afraid of what is contrary to every evidence;

Claim insofar as one is involved with objects which are contrary to all evidence;

Opinion as dogma insofar as one has rationalized it;

Fiction insofar as one is enamored with it;

Opinion insofar as one makes it the content of one's thinking.

The reason for speaking about this view its 'opinionatedless about what is perishable, is as the lan►rim states,

I lere, it thing which is perishable is impermanent, and accumulation means plurality. Since the basis of looking and thereby seeing the perishable as perishable is just transitoriness and plurality, one gives it the name of 'view of perishable' because of the statement that there is no eternal and single abiding principle to which it thing may he reduced.';

That the function of opinionatedness is to serve as the basis for all bad views is also stated in the gz1111n nu 111(11►clnt g►li rhlg.s In►j1►rl (Sit ptakumarvavadanit):

Where and when will a person ever
Become detached from the necessities of life and
 Tear out opinionatedness regarding the perishable constituents
Which is the mother of all biases? (33b)
When opinionatedness regarding the perishable is classified according to its content, there are twenty biases. It becomes twenty by subdividing each of the five constituents by way of four alternatives such as taking color-form as the self, taking the self as having color-form, taking color-form as one's possession, or letting the self reside in color-form and then repeating the same procedure for feeling-tones, ideation, motivation, and perception. Thus it is stated (by Nagarjuna) in hsbes-spring (Suhrillekha, 49):

**Color-form is not the self.**

*Self is not possessed of color-form and color-form is not existing in the self.*

*Nor is the self residing in color-form.*

*In the same way, the other basic elements Ought to be understood as nothing in themselves.*

The bdu-ma la 'jug (Madhyamakavatara, VI, 144-145) states,

*Color-form is not the self, the self does not possess color-form,*

*The self does not exist in color-form, nor does color-form exist in the self.*

*In the same manner, all four of the basic elements ought to be known.*

*They are considered to be the twenty biases regarding the self.*

*The vajra-staff which knows that the self—that mountain of biases—does not exist Cuts right through and that (imagined) self is instantly destroyed.*

*Opinionatedness regarding the perishable constituents dwells on Mount Sumeru and Has become its lofty summit.*

These twenty kinds of opinionatedness regarding the perishable constituents are explained concisely as the two
attach meats in the form of `I' and `mine', but if you wish to know their concrete nature in detail, this can be learned from the explanation in the ,Afdah yantakacntara, the dgongs-pa rah gsal, and the :~bl►idhnrutsnm urrrya together with its comntentarv.

The n►ngon-pa kun-htus (Abhidharmasamuccava, p. 7) explains opinionatedness regarding the extremes as follows:

What is opinionatedness regarding the extremes? (34a) It is any acceptance, claim, opinion as dogma, fiction and opinion which is completely biased taking the five original elements as eternal existence or as non-existence, and its function is to prevent gaining certainty through the understanding of reality as it comes through the middle way.

It is an emotionally toned appreciation of the self as it is conceived by a nihilistic view ['jig-lta] in terms of absolute eternalism or absolute nihilism.

The last-rim explains these two latter views as follows:

The opinion holding to an extreme is an emotionally toned appreciation that sees the self, as conceived by the nihilistic view ['jig-lta as being absolutely eternal or absolutely nihilistic since there will he no subsequent existence.

Therefore, since these bad views make a person fall into the extremes of eternal existence or eternal non-existence, they are the primary obstacles for seeing the middle path which has nothing to do with eternalism or nihilism.

The ningon-pa kun-htus (Abhidharmasan►uccava, p. 7) explains clinging to ideologies as follows:

What is clinging to ideologies? It is any acceptance, claim, opinion as dogma, fiction and opinion to hold the five psychophysical constituents-as far as they are
occasions of an opinion about them—as the supreme, the principle, the particularly sublime, and the absolutely real. Its function is to serve as the basis for becoming even more enmeshed in wrong views.

Clinging to ideologies is an emotionally tainted appreciation which overevaluates other wrong views and the constituents of the personality. (34b)

The terms such as 'supreme' are here understood as follows:

Supreme is the thought, "How wonderful things are!"

Principle means there is nothing over and above this.

Absolutely real means to hold something as superior and to claim that there is nothing like it.

The lam-rim states,

The opinionatedness of clinging to ideologies is an emotionally tainted appreciation that is concerned with the constituents of the personality of the viewer as they are seen in any one of the three opinions—opinionatedness regarding the perishable, the extremes, and wrong opinion. Thus, opinionatedness is also the cult of what is seen in the light of the ideology.

Its function, which is to serve as the basis for becoming even more entwined in wrong views, means that clinging to ideologies prepares the tendencies of not getting away from evil views in the here and hereafter.

Clinging to ideologies concerning ethical behavior and compulsive performance is explained in the mgon-pa kun-btus (Abhi(lharmasanu►ccaya, p. 7) as follows:

What is clinging to ideologies concerning ethical behavior and compulsive performance? It is any acceptance, claim, opinion as dogma, fiction and opinion which holds the five basic constituents and the foundation
of ethical behavior and compulsive performance as pure, capable of deliverance from the emotions, and certain to liberate. Its function is to serve as the basis for uselessness.

It is an emotionally tainted appreciation that sees as pure and free it code of behavior that is conditioned by had views-for example, compulsive behavior (35a) such as wearing certain apparel, adopting mannerisms of speech, and whatever comes out of these things.

The lam-rim states,

Clinging to the ideologies of ethical behavior and compulsive performance is an emotionally toned appreciation which is opinionated regarding washing away sins, deliverance from the emotions, and certainty of becoming disgusted with snmt.sm by following ethical behavior which renounces morality, compulsive observation which insists on formalities, and modes of behavior and mannerisms of speech and whatever may result from them.

The statement that its function is to serve as the basis of uselessness is self-explanatory.

The ningon-pa kun-lotus (Abhidharmasisamuccaya, p. 7) explains 'wrong opinion' as follows:

What is wrong opinion? It is the denial of cause and effect and of action and its result, and it negates and does away with what is. Wrong opinion is an acceptance, claim, opinion as dogma, fiction, and opinion which holds oil to error. Its function is to eradicate the good, to cut off the root of what is positive, to make the root of evil healthy, and to get into evil but not into the positive.

It is an emotionally tainted appreciation which sees the relationship of cause and effect of ones action and (the relationship) of earlier and later life as non-existent. Regarding this, the lam-rim states,
A perverted opinion is an emotionally toned appreciation which denies causation as to its former and later life, the relationship between one's action and its effect, and holds that Sire or prakrti are the causes of sentient beings. (35b)

There are four kinds of wrong opinions:

1. Denial of cause
2. Denial of effect
3. Denial of agent
4. Denial of what is in front of one's eyes

Denial of cause is to see good actions, had actions, etc. as non-existent.

Denial of effect is to see the positive and negative as having no consequence.

Denial of agent is to see father and mother, previous and later worlds as non-existent.

Denial of what is in front of one's eyes is to see the attainments of the Buddhas and Arhats as non-existent.

Although, generally, there are many wrong views, the wrong views that deny the relationship between action and its results and (the relationship) between previous and later worlds are the worst of all because they eliminate everything positive.

Now, if the five kinds of opinionatedness are summarized, they fall under affirmation and negation. Their internal differentiation are: 1. the twenty ways of opinionatedness regarding the perishable; 2. sixty-two bad views; and 3. fourteen indeterminate ones. The sixty-two bad views have been explained in the nulo sdbtshangs-pa'i dra-ba (Brahmajalasfitra). To list them all individually would go too far, so they are not put down here.
The fourteen indeterminate views are the four views that hold on to the extreme of the past, the four which hold on to the extreme of the future, the four which deal with nirrnnmut, and two views which deal with the body and life force. (36a)

The four that hold on to the extreme of the past are the views that the self and the world are permanent, impermanent, both, and neither.

The four which hold on to the extremes of the future are the views that the self and the world are eternal, not eternal, both, and neither.

The four which deal with nirrarna are the views that a Tathagata will appear, will not appear, will both appear and not appear, and will neither appear nor not appear at the time of (one's) death.

The two which deal with the body and life force are the views that the body and life force are either one substance or different ones.

These views are claimed by the Sdipkhva [grangs-can], the Carvaka [rgvang-'phen], the Xirgrantha [gcer-bu-pa], an[ ] the Vatsiputriya [gnas-ma-bu], but in this commentary, only the names of these schools will be mentioned; if you wish to know in detail their individual features and the way in which their distinctions are applied, von will have to study the very precious Sutras and the Nladhvamika works which comment on them.

These views are called `indeterminate' not because they do not offer anything positive or negative and hence indeterminate, but because the Samkhya philosophers and others start with the premise that the individual personality has an unchanging eternal substance. When one questions whether the self and the world are permanent or not and so on, (36b) they claim that "a system which does not explain the eternal self is unsuitable" and become very upset, instead of explaining the existence of an eternal substance
which they claim must be the special foundation if there is to be it particular thing. It is in reply to their view that I say their claim is indifferent (ie., misses the mark).

Thus, the rin-rhn 'plurng-ba (Ratnamala) states,

When asked, “Is the world infinite or not?”
It is said that the Buddha did not answer.
Why did he not explain such a profound teaching
To those who do not understand?
By that (silence) alone, the wise know that
He is the Omniscient—Knower of everything.

The Twenty Proximate Factors of Instability
[nye-nyon nyi shu]"

The twenty proximate factors of instability are:

1. Indignation [khro-ba]
2. Resentment [khon du 'dzin-pa]
3. Slyness-concealment [’chab-pa]
4. Spite ['tshig-pa]
5. Jealousy [phrag-dog]
6. Avarice [ser-sna]
7. Deceit [sgvu]
8. Dishonesty [gYo1
9. Mental inflation [rgyags-pa]
10. Malice [ream-par ‘tse-ba]
11. Shamelessness [ngo-tsha rated-pa]
12. Lack of sense of propriety [khrel med-pa]
13. Gloominess [r►nugs-pa]
14. Ebullience Irgod-pa]
15. Lack of trust [nma-dad-pa[)
16. Laziness [le-lo]
17. Unconcern [bag-coed]
18. Forgetfulness [brjed ngas-pa]
19. Inattentiveness [shes-pa bzhin ma vin]
20. Desultoriness [ream-pa g"\ eng-ba]

**Indignation [khro-ba]**

The n►ngon-pa ku►►-htus (3 bhi(lharn►asamnecava, p. 8) explains indignation as follows:

What is indignation? It is a vindictive intention which is associated with anger when the chance to hurt is near at hand. Its function is to become the basis of taking hold of it knife, killing, and preparing to strike.

It is it vindictive intention which intends to strike (37a) when any one of the nine chances for it vindictive attitude is near at hand.

The nine chances for it vindictive attitude are the three ideas of, "he has harmed me, he is harming me, he is going to harm une"; the three ideas of, "he has harmed ▶uv relatives, is harming them, and is going to harm them"; and the three ideas of, "lie is siding with my enemies, has sided with them, and will side with them." These nine are called the basis of harm according to the previous explanation of their causes.

In case one wonders what the difference is between anger in view of being it basic emotion [khong-khro] and
In explaining anger, the kun-plus (A1)hidharnr<tsan►uccava) says that it is its vindictive attitude concerning the above three ideas and explains indignation as 'the opportunity to harm and 'taking hold of it weapon'. The plumg-po h►ga i rub-hyed (Pancaskandhaprakarana) on the other hand explains anger as 'vindictiveness towards living beings, but explains indignation as the immediate act of harming. (3Th) If this is what the two brothers, Asai►ga and Vasubandhu, have to say, intelligent people should study the problem deeply since it is very difficult to understand. The function of indignation as harming others offers no problems.

Resentment [khon du 'dzin-pa]

The mngon-pa kun-htu.s (Abhidhannasan►uccava p. 8) explains resentment as follows:

What is resentment? It is not letting go of an obsession which develops through association with the anger which underlies it. Its function is to be the basis of non-endurance.

It is an intention in which one will not let go of the continuous feeling of resentment and in which one retaliates measure for measure. Its function, not to tolerate, is easily understood.

Regarding these two mental events, the rin-e hen 'phreng-ba (Ratnamala) states,

Indignation is an unsettling event in the mind, 
And resentment comes in its wake.
Slyness-concealment [chab-pa]

The mngon-pa kun-btus (Abhidharmasamuccaya, p. 8) explains slyness-concealment as follows:

What is slyness-concealment? It is to perpetuate a state of unresolvedness [kha-na-ma-tho-bal because of its association with dullness and stubbornness [gti-iuug] when one is urged towards something positive. Slyness-concealment has the function of preventing one from making it clean break with it and feeling relieved.

It is the intention to cover up one's evil through stubbornness when one's spiritual friends or others, in their desire to help one, raise the point of one's evil. (38a)

By concealing one's evil and not admitting it, evil, however small, will grow bigger and Nigger and will provide a cause for not allowing one to make a clean break with it and feel relieved. It will throw one into evil forms of existence later on.

Spite [tshig-pa]

The mngon-pa kun-btus (Abhidharmasamuccaya, p. 8) explains spite as follows:

What is spite? It is a vindictive attitude preceded by indignation and resentment forming part of anger, and its function is to become the basis for harsh and strong words, to increase what is not meritorious, and not to allow one to feel happy. 

It is the urge to use harsh words of disagreement due to anger and resentment when others raise one's shortcomings, because one has no intention to make a clean break with evil and get it out of one's system.

Concerning this, the phung-po Inga'i rob Injed (Pa icaskandhaprabhakara) explains 'revile by harsh words' to mean to ridicule'. But the nudzod 'grel
(_lbhi(lharn►akosavvak hva) explains that spite originates from believing vice to be virtuous and from overevaluating ideas. By these one plunges into many evil actions such as speaking harsh words. Nlanv non-
►neritori- ous situations are generated so that in this life one cannot feel happy and, in the next one, unpleasant results are brought about.

Jealousy [ph rag-dog]

The argon-pa kun-btus (:lbhidharurtsamuccava, p. 8) explains jealousy as follows:

What is jealousy? It is it highly perturbed state of mind (38h) associated with aversion-hatred which is unable to bear other's excellences by being overly attached to gain and honor. Its function is to make the mind unhappy and not to allow one to feel happy.

It is a highly perturbed ►nind which is unable to bear excellences of others because of its attachment to wealth and honor.

This brings about, both here and in the next world, great unpleasantness. In this life there is unhappiness, and, in the next one, one will be thrown into evil forms of existences.

Avarice [ser-sna]

The n►ngou-pa kun-htu.s (; l)hi(lharm►asamuccava, p. 8) explains avarice as follows:

What is avarice? It is an over-concern with the material things in life stemming from over-attachment to wealth and honor, and it belongs to passion-lust. Avarice functions as the basis for not letting up in one's concern for the material things of life.

Avarice is the state of mind which, by being overly attached to wealth and honor, holds the material things of
life to he all that count and is unable to give them up.

In this and the next life, it brings about much unpleasantness. The :lu-ba sgr•on-me (Chandrapradipasi tra) states,

If fools are attached to this body
Which is rotting away, or to life
Which is shaky and has no power of its own
And therefore resembles more a dream or apparition,

They do many inappropriate things
And come under the power of evil.
They are carried out on the carriage of the Lord of Death
And wander about in hell.

And the sgo mthu'-yas-pu sgruh-pa'i gztings says,

Sentient beings who get into a fight
Hold to the basis of their quarrel.
Should they overcome whatever attachment to the cause they have and
Get rid of their attachment, they would become powerful.

And there are many more such statements.

Deceit [sgyu]

The ningon-pa kun-btus (Ahhidharmasamuccaya, p. 8) explains deceit as follows:

What is deceit? ~39a) It is it display of what is not a real quality and is associated with both passion-lust and bewilderment-erring by being overly attached to wealth and honor. Its function is to provide a basis for a perverse life-style.

Through the power of being overly attached to wealth and honor, deceit makes one pretend to be a virtuous person. For example, a hypocrite, although his mind is not at all under control and trained, gives the appearance of being
quiet and well-trained, with the intention of deceiving others.

Here, the phung-po inga’i rah byed (Pancaskandhapraparakara) explains deceit as the display of what is false, and the lain-rim explains it in the same manner. The statement that it is the basis for a perverse life style means that there is no other or better way to lead a perverse life than to pretend.

There are five perverse life styles [log 'tsho nga]:

1. Hypocrisy [tshul-'rhos]
2. Flattering [kha-gsag]
3. Overpraising [gshogs-slong]
4. Evaluating by possessions [thob kyis 'zal]
5. Seeking wealth by wealth [rnyed-pas rnyed 'tsholl]

Hypocrisy means, as stated above, that while one has no (virtuous) qualities, one pretends to have them and puts up an outward appearance so that others will not see through him.

Flattering means to talk smoothly by using words agreeable to the opinions of others for the sake of wealth and honor.

Overpraising is, in the desire for someone else's property, first to flatter him and then to praise what he owns.

Evaluating by possessions means that one puts down another by saying he is so greedy in order to gain something.

Seeking wealth by wealth means that by having become completely obsessed with wealth, one brags about what one has attained previously in front of others by saying, "I
was blessed (39b) in such and such a way by this great person."

In brief, going from house to house for alms because one is attached to wealth is not in keeping with what is explained in the teaching, and this is said to he a perverted life. If you do not want to lead a perverted life, then cast away the opinions of others and, in solitude, preserve the piles of discipline without fooling yourself.

Dishonesty [gYø]

The mgon-pa kun-hats (Abhidharmasannuccaya, p. 8) explains dishonesty as follows:

What is dishonesty? In one's desire for wealth and honor, one makes evil good by associating with both passion-lust and bewilderment-erring. It provides an obstacle for getting good counsel.

It is the intent to conceal one's shortcomings from others because one is so attached to wealth and honor.

Nowadays, people like us try to keep our mistakes a secret, but when others find out our hidden secret, we become meek and prudent, ultimately we deceive ourselves.

One should think about this matter over and over again as stated in the spyod-'jug (Bodhicaryavatara, V, 31-32),

I am constantly living
Under the watchful eyes of
The Buddhas and Bodhisattvas
Who have unlimited vision.

Thinking in this way, I should consider
Self-respect, devotion, and apprehensiveness.

These two, deceit and dishonesty, hinder the obtaining
of good counsel in this life and in the next one, and they set up various forms of unpleasantness such as (40a) not meeting spiritual teachers in the Mahayana. Therefore, these two are counted among the four bleak thins referred to in the Kasyapaparivarta (Chapter 3).

Mental inflation [rgyas-pa]

The mgon-pa kun-htus (Abhidharmasamuccaya, p. 9) explains mental inflation as follows:

What is mental inflation? It is joy and rapture associated with passion-lust because one sees as excellences the prospect of a long life and other fragile good things by trusting ones youth and good health. Its function is to provide it basis for all basic and proximate emotions.

It is an inflated mind which is full of joy and rapture in view of health, abundance of pleasure, etc. It is the root of unconcern by generating all other emotions. The Ihag bsam bskul-ba (Adhyasavasamcodanasitra) states,

An inflated mind is the root of unconcern.
Never treat a poor bhikṣu with contempt
Or you may not find salvation in an aeon.
This is the orderly procedure in this teaching.

The bsbes-sbring (Suhrillekha, 12) states,

Look at the vain glory of your social status and appearance,
Your learning, your youth, and your power as your enemies.

Malice [rnam-par 'tshe-ba]

The ningon-pa kun-btus (:1bl~idhanuasamuccaya, p. 9) explains malice as follows:

What is malice' It belongs to the emotion anger, lacks loving kindness, pity, and affection, and has the function of treating others abusively.
It is the desire to treat others abusively (40b) without having kind feelings towards living beings.

Here the various synonyms beginning with lack of loving kindness are explained according to the commentaries which say that 'lack of loving kindness is one's own inclination to treat others abusively. 'Lack of pity' is the inclination to induce others to treat others abusively. 'Lack of affection' is to he pleased when one hears or sees others acting in such a way.

Its function is easily understood.

Shamelessness [ngo-tsha med-pa]

The mgon-pa kun-btus (Al)hi(lharasamuccava p. 8) explains shamelessness as follows:

What is shamelessness? It is not restraining oneself by taking one's perversions as one's norm. It is an emotional event associated with passion-lust, aversion-hatred, and bewilderment-erring. It aids all basic and proximate emotions.

It is a strong subjective tendency [blo] not to restrain one's shortcomings by taking oneself or an ideology as the norm. For instance, when a 1hiksu is in a situation where he might have to consume alcohol and he refrains from doing so by thinking, "It is not for me to do," he takes himself as the norm and this restraint from evil is self-respect. The opposite is shamelessness.

Lack of sense of propriety [khrel med-pa]

The n►►►g it-pa kt►► p-bus (Abhidharmasanaccaya, p. 9) explains the lack of sense of propriety as follows:

What is lack of sense of propriety? It is not restraining oneself by taking others as the norm. It is an emotional event associated with passion-bast, aversion-hatred, and bewilderment-erring. It aids the basic emotions and the
proximate emotions.

It is a subjective tendency not to curb (restrain) evil (41a) by taking others as the norm. Again, concerning this, when one is tempted to do evil (and restrains from doing so) and thinks, "It is not proper to be frowned upon by others who are worthy of respect, such as teachers and the Gods who look into the mind of others"—one thus avoids evil by taking others as the norm. This is decorum. The opposite of this is the lack of the sense of propriety. The ri► r-ngccti 'jrhrng-i-r (Ratnabila) states,

Shamelessness and lack of a sense of propriety
Means not to exercise restraint in view of oneself and others.

The In ang-sa (Rodhisattvaahfuui) states,

Self-respect is it Bodhisattva's self-restraint in the knowledge that any indulgences in impropriety is not his way. Decorum is this restraint in fear and respect of others.

Roth the lack of self-respect and the lack of the sense of propriety aid all of the emotions and are the causes of all evil. If one does not want to refrain from evil, one cannot protect oneself against it. Therefore, both the earlier and later Ahhidharnta works state that the lack of self-respect and the lack of propriety are said to be on the saute level as and correspond to all unhealthy attitudes. Although more could be said, this will suffice.

Gloominess [rmugs-pa]

The songon-pa kun-htus (Abhi(Iharnutsanutccava, p. 9) explains gloominess as follows:

What is gloominess' It is the way in which the mind cannot function properly and is associated with listlessness Igti-niiigi. Its function is to aid all basic and proximate emotions.
It is a very subjective tendency in which physical and mental (41b) heaviness and sluggishness dominate.

Concerning this, the rim-clicn 'hhrung-ha (Ratnamala) states,

Gloominess is any lack of activity
Due to heaviness of body and mind.

The ndzod-‘gre1(Al hidharmakosayv~ikhwa) states,

\What is gloominess? It is heaviness of body and heaviness of mind. It is a state of physical inertness and mental inalertness.

The lain-rim explains it in the same manner.

The statement that its function is to aid all of the basic and proximate emotions means that all of the emotions increase in intensity on account of gloominess. Therefore, the lhag-hsn»i hskul-ba (Adhyasayasamcodanasfitra) states,

Whoever rejoices in sleep and sluggishness
Will have a distorted view of his world,
As when body fluids, air and bilious fluids
Become excessively present in the body,

Whoever rejoices in sluggishness and sleep will be dulled
Just as food which has turned bad is not healthy.
When the body is heavy, the complexion will be unhealthy,
And even one’s speech will become incoherent.

And,
Ebullience [rgod-pa]

The n■ngon-pa kun-bins (Abhidharmasamuccaya, p. 9) explains ebullience as follows:

What is ebullience? It is restlessness of mind which is associated with passion-lust that gets involved with (42a) things considered to he enjoyable. Its function is to obstruct quietness.

It is a very subjective tendency which becomes involved with craving and running after what has previously been seen as pleasurable experience. Regarding this, the rin-chen 'pl►reng-ba (Ratnaniala) states,

Ebullience is an utter restlessness in body and mind.

The phun --po Inf u'i rub byecl (Pa►icaskandhaprakarana, P. ed. 11:3, p. 238, 4.3) says.

What is ebullience? It is the unsettled mind.

The him-rim elaborates this by stating,

Its objective reference is it pleasant and enjoyable object. Its observable quality is it restlessness of mind and a move towards its object. And since passion-lust predominates, ebullience proceeds in the observable quality of Craving. Its function is to hinder the mind from settling on its reference.

It is not proper to think that every instance of the mind going out towards something is it case of ebullience. This ebull- hence is it preponderance of cupidity-attachment and there are many instances when the mind goes out towards
its object by way of other emotions which are not passion-Inst. Since it mind can go out towards its objective reference without there being any emotions involved, every going out towards its object is not a case of ebullience.

Lack of trust [ma dad-pa]

The nungon-pa kun-htus (Abhidharmasanntccava, p. 9) explains the lack of trust as follows:

What is lack of trust?: It is the mind associated With the category bewilderment erring which does not have deep conviction (42b), has lack of trust, and has no desire for things positive. It provides the basis for laziness.

It is a preponderance of dullness which is not conducive to trust. There are three kinds:

1. Lack of trust which does not have it deep conviction regarding the relationship between action and its result and is not conducive to trusting confidence

2. Lack of trust which is not clear about the virtues of the Three jewels, finds no joy in their contemplation, and is not conducive to lucid confidence

3. Lack of trust which is not concerned with liberation -and does not even want it-and is not conducive to longing confidence

Its function is easily understood.

Laziness [le-lo]

The nzungon-pa kun-btus (Abhidharmasanntccava, p. 9) explains laziness as follows:

What is laziness? It is an unwilling mind, associated with bewilderment erring, relying on the pleasures of drowsiness, lying down and not getting up. Its function
is to obstruct and hinder one in applying himself to positive things.

It is an unwillingness to apply oneself towards the wholesome since it indulges only in loafing and falling asleep.

Laziness makes all positive things drop away. The Bran-pa nt/c-hmr hzln pa (Smrtyupasthana) states,

The sole foundation of the emotions
Is laziness. If, in whatever exists, There is found even a trifle of laziness, It will be just nothing.

Unconcern [bag-med]

The »u►gon-pa ku►►-Wits (.Ahhidharn►samuccaya, p. 9) explains unconcern as follows:

What is unconcern? It is to persevere in passion-lust, aversion-hatred, and bewilderment-erring aggravated by laziness. It is not to attend to what is positive (43a) and so also is not to protect the mind from those things which cannot provide lasting satisfaction. It provides it basis for increasing the unhealthy state and decreasing healthy ones.

It is it subjective tendency to throw every care to the wind by not protecting the mind from the emotions and evils which accrue through them.

The pluurg-po Inga'i rab-hyed (Pain(-askandhaprakarana. P. ed. 11:3 p. 2:38, 3.8) states,

What is unconcern? It is not to attend to what is positive and not to protect the mind against the emotions through either passion-lust, aversion-hatred, bewilderment-erring, or laziness.
Its function is easily understood.

**Forgetfulness [brjed ngas-pa]**

The ntngon-pa kun-bins (: Abhidharmāśamuccaya, p. 9) explains forgetfulness as follows:

'What is forgetfulness'? It is fleeting inspection which is simultaneous with and on the same level as the emotions. It functions as the basis of distraction.

It is a Hash of awareness in which the mind is not made clear and forgets immediately the positive thing because it is an attention to an emotionally tainted object. Thus, since the pl ingr po Inga'i rah hyr'rl ~Pancaskandhaprakaranal declares that forgetfulness is an emotionally tainted inspection, to be oblivious to and slim about it positive mental attitude is said to be forgetfulness. Since an emotionally tainted object having pleasant or unpleasant characteristics does not become the object of the mind, it cannot impress the mind, therefore, this cannot be called 'forgetfulness'.

Its function of distracting means that, clue to any continually tainted inspection, the mind is uneasy concerning the emotionally tainted object (43b).

**Inattentiveness [shes-bzhin na-yin]**

The ntngon-pa kun-btus (Abhiharmasannctccava, p. 9) explains inattentiveness as follows:

What is inattentiveness? It is it discriminating awareness which is simultaneous with and on the same level as the emotions and thereby is made inattentive regarding actions by body, speech, and mind. It has the function of providing it basis for falling from one's level of being.

It is an emotionally tainted discriminating awareness which lacks watchfulness with regard to the activities of body, speech, and mind and is not associated with
carefulness.

That this inattentiveness becomes the foundation for falling from one's level of being is as the spyod-'jug (Bodhicaryavatara, V, 26) states,

A person who is learned and has trust
But does not apply himself diligently
Will be sullied by falling from his status
Because the defect of not being watchful has clung to him.

Desultoriness [rnam-pa gYeng-bal

The nmgon-pa kun-htus (Abhidharmasann►(,cava, p. 9) explains desultoriness as follows:

What is desultoriness? It is to be it scatter-brain and belongs to the categories of passion-lust, aversion-hatred, and bewilderment-erring. Its function is to obstruct one from becoming free of passion-lust.

It is a mind forced to become distracted from its objective reference through the power of the emotions. The pltung-po Inga'i rah-Inled (Pa►icaskan(lhaprakarana, P. ed. 113, p. 238, 4.2) states,

The mind is scattered over the five desirable objects of the sensuous world.

If von think that there is no difference between this and ebullience explained above, you should know that 'ebullience' is it going out towards the pleasurableness of an object one has previously known and therefore belongs to passion-lust. Desultoriness is tied up with all three poisons and is concerned with any object and hence these two states are not similar.

There are six kinds of desultoriness K44a):

1. Desultoriness qua desultoriness [ago-bo-nvid gvi g1 eng-ha I
2. Desultoriness regarding the without [phyi-rol to gFeng-ha]

3. Desultoriness regarding the within [nang gyi gYeng- ha]

4. Desultoriness regarding defining characteristics [mtshan-nra'i g°eng-ha]

5. Desultoriness of inappropriate actions [gnas-ngan-len g' eng-ba]

6. Desultoriness by rationalization [yid-la-hued-pa'i ( T l

Desultoriness qua desultoriness refers to the five sensory perceptions. When one is in the state of meditation, one will rise out of it at any moment when any one of the five sensory perceptions takes place; this is to say that the mind is distracted from its state of concentration.

Desultoriness regarding the without is the going out of the mind towards yu►alities which do not make one want to stay with them when one has just entered into what is positive through the three activities of listening, thinking, and attending. This is to say that one does not stay with the positive object, but moves towards the opposite.

Desultoriness regarding the within is a craving to relish, it state of elation, depression or indifference in meditation. The reason we speak of internal agitation is that these factors are the main distractions to concentration.

Desultoriness regarding defining characteristics means to apply oneself to the positive when one thinks that he too should do it because others say, "This is meditation."

Desultoriness of inappropriate action is an inflatedness by the idea of `I' and `mine' with reference to the feeling of getting into what is positive while depending on the
pitfalls provided by (perverted) views, which take what is perishable as the last word about reality, and by arrogance.

Desultoriness by rationalization is like giving up the equanimity of the fourth meditation—'"(441)) for the equanimity of the three lower meditations or to exchange the Mahayana for the Ilinavana.

All of these are called distractions in a general way, but this does not mean that they are all proximate emotions. The first one is indeterminate and the last one is positive. The real proximate emotion of desultoriness is the desultoriness regarding the without and the within. An intelligent person should study this distinction carefully.

Thus, these twenty proximate emotions from indignation to desultoriness are said to be the proximate factors of instability because they are very close to the basic emotions or associated with them. Moreover, they must also be known individually as to their relationships, for instance, whether the proximate factor of instability, indignation, is close to or associated with the basic emotion anger. Such things are made clear in the Abhidharma texts quoted many times previously. [See Appendix, Figure 3, p. 120.1

The Four Variables [gzhan 'gvur hzhi],"}

The four variables are:

1. Drowsiness [gnvid]

2) Worry ['(fYod]

3. Selectiveness [rtog-pa]

4. Discursiveness [dpvod-pa]

Drowsiness [gnyid]

The inngon-pu kun-htus (Ahhicharinasaniuccaya, p. 10) explains drowsiness as follows:
What is drowsiness? By making the cause of drowsiness its point of departure, the mind is agreeable to the positive, negative, indifferent, timely, untimely, appropriate, and inappropriate. Drowsiness is related to bewilderment erring. Its fune- two is to become the basis of slipping away from what must he done.

It is a strong subjective attitude in which the perceptive organs which operate on the object are made to turn helplessly inward because of being preoccupied with the heaviness of body, little excitement, weariness, and a general haziness. (45a)

Here, the statement `timely and untimely' is elaborated by Nagarjuua (Suhrllekha, 38) who says,

Oh great beings! During the day and even
During the night, the time after sunrise and sunset,
Even while asleep, let the time not be fruitless!
Don’t let inspection slip away during those times.

One must understand that the time to sleep is curing the night. The time curing the forenoon, afternoon and daytime, not being the time to sleep, is the time for striving assiduously to do positive actions.

The statement `appropriate and inappropriate' is employed for the sake of understanding that during the night sleep is appropriate for increasing the ability of the body to attend to positive tasks; but sleep which is disturbed by the emotions, even if it be during the night, is inappropriate. The reason for this can be known from the texts quoted above.

Its activity is explained as `slipping away from what must be clone' because sleep has two aspects-the positive and negative. The negative aspect of sleep which is emotionally tainted makes one dread positive tasks which must be done. The positive aspect of sleep is explained in detail in the sa-sdcc (Bod- hisattvabhfuni), but since it
would require too many words to quote it, I shall omit it."

(45b)

Worry

The mgon-pa kun-htus (bhidharn~asan~uccaya, p. 10) explains worry as follows:

That is worry? It is an obsession regarding the positive, negative, indifferent, timely, untimely, appropriate and inappropriate on account of anything to be done intentionally or unintentionally and is related to bewilderment-erring. Its fiction is to obstruct the mind from becoming settled.

Worry is produced from impressing over and over again on the mind what is not pleasing in view of actions wade through continually thinking, 'Is what is to be done appropriate or not:', or of actions induced through what others may say.

Worry also has the three aspects of being positively toned, negatively toned, and neutrally toned. To worry about offensive things clone previously is positively toned. Worry which is produced from having clone pleasurable things is negatively toned. To worry little about the situation of work which may profit or may not profit someone else is neutrally toned.

The statement 'timely and untimely, appropriate and inappropriate' means that if one worries in time which still holds it promise, it is appropriate, and if one worries in time which does not hold it promise, it is inappropriate. The appropriateness of worrying in time which still holds it promise is like the necessity of making confession now because, although karma has not yet matured, one will have to worry later about the evil. Worry in time which holds no promise is like being born into evil existence from the maturation of man's actions and, since the life of it blind man or it cripple is the situation in which maturity has been completed, it cannot be altered. (46a) Therefore, if
one studies deeply the treatise of the nṅgon-pa kun-btus (Abhidharurtsannic(-aya), it will certainly become the most wonderful occasion for gaining certainty in the gradation of the path.

Selectiveness [rtog-pa] and Discursiveness [dpyod-pa]

The nṅgon-pa kun-btus (Abhidharunasamuccaya, p. 10) explains selectiveness together with discursiveness as follows:

What is selectiveness? It is a mental addressing that takes in everything in the wake of intention or appreciative discrimination. It is a coarse mental operation. What is discursiveness? It is a mental addressing which is attentive to one thing at it time in the wake of intention or appreciative discrimination. It is an exact mental operation. It has the function of becoming the basis of happiness or unhappiness.

Selectiveness is a rough estimate of the thing under consideration and discursiveness is an exact investigation of it.

The plumg-po !nga'i rah-bi/e(I (Paneaskandhaprakarana, P. ed. 113, p. 238, 4.3-4.4) says,

What is selectiveness? It is it mental addressing which ranges over everything. It is a coarse mental operation which is a particular aspect of intention and appreciative discrimination. What is discursiveness? It is a mental addressing which is attentive to one thing at a time and accordingly is an exact mental operation.

The two brothers (Asanga and Vasubandhu) seem to agree with this explanation.

The statement, `it is the basis of happiness and unhappiness', means that since both selectiveness and discursiveness have a positive and negative aspect, the positive aspect of both ought to be known as the basis of
happiness because by the positive aspect pleasant results occur; the negative aspect of both (46b) ought to be known as the basis of unhappiness because by the negative aspect unpleasant results occur.

Moreover, selectiveness regarding the significance of `no abiding substance', in view of getting out of saicnsra and being discursive about it, is the positive aspect. To he selective about pleasant or unpleasant objects, kindled into action by passion-lust, aversion-hatred and so on, and to inspect them in detail, is the negative aspect. Selectiveness and discursiveness regarding situations, behaviors and so on, which are neither positive nor negative with respect to the mind, is the indeterminate aspect.

The reason for calling drowsiness, worry, selectiveness and discursiveness the four variables' is that they become positive, negative, or indeterminate according to the level and quality of the mental situation. Generally, the emotionally tainted drowsiness, worry, selectiveness and discursiveness obstruct every aspect of the positive-specifically, the three kinds of higher training.

The five obscurations, stated in the Suttras, are expressed by :rya Nagarjuna (Suhrllekha, 44) as follows:

Ebullience, worry, a mind to injure (malice), sluggishness. Drowsiness, cupidity-attachment, and doubt—Know well that these five are the thieves Who rob one's wealth of the positive.

The five obscurations are counted as five because ebullience and worry K4 i a) are considered as one obscuration: drowsiness and sluggishness are also considered as one, and a mind to injure, cupidity-attachment, and doubt are counted individually.

These five obscurations, such as drowsiness, mean that, in general, all positive (training) and, in particular, the three kinds of higher training, are obscured. Cupidity and it mind to hurt obscure the higher training in self-
discipline. Drowsiness and sluggishness, ebullience and worry obscure mental training. Doubt, selectiveness and discursiveness obscure training in appreciative discrimination.

The uuigon-pa kun-htu,s (.lbhidharn►asanu►c(-aya) says that by these five obscurations, rules of self-discipline and concentration are obscured, but the sdom-pa nyi-shu-pa'i 'grel pa (Samvaravimsakatika) says that only concentration is obscured. In short, since the explanations in other texts are almost the same as the Abhidharma works, there is no need to explain them here.

Now then, how is it that sluggishness which operates as a proximate factor of instability and drowsiness which operates as a variable are considered as one in the situation of the five obscurations? In the same way, how is it that ebullience which operates as a proximate factor of instability and discursiveness which operates as a variable are considered to be one? Sluggishness and drowsiness are not the same. Sluggishness is a part of bewilderment-erring. Drowsiness can be either positively or negatively toned; hence, sluggishness is said to be a proximate factor of instability and drowsiness is said to be a variable. In the same way, (47b) with regard to ebullience and worry, ebullience is part of passion-lust. Worry can be either positively or negatively toned; hence, ebullience is said to be a proximate factor of instability and worry is said to be a variable. They are considered as one in the scheme of the five obstructions and said to be one insofar as they start from the same cause, are extinguished by the same antidote, and are identical in their function.

That they occur from the same cause means that both sluggishness and drowsiness start from over-stuffing oneself with food, from an unhappy mind, from a fainthearted attitude, and from relishing things. Both ebullience and worry start from indulging in the pleasures of the senses, playing around, laughing, and believing the fiction that one will not die.
That they are extinguished by the same antidote means that both sluggishness and drowsiness are overcome by an awareness of light, and ebullience and worry are overcome by holding the mind to an inner object (idea).

That they agree as to their function means that they agree because sluggishness and drowsiness make the mind withdraw inward and thus they obstruct concentration. Even worse, they obstruct lucidity of ideas and so they prevent the mind from being completely concentrated.

Thus, for my own edification, I have explained in a small way the basic emotions, the proximate factors of instability, and the four variables. It is very important to know the individual characteristics of the Buddha's teaching: the manner in which karma originates from its cause; the way in which the individual objective reference is simultaneous with and on the same level as the specific (emotion); the way in which it becomes a positively toned, negatively toned, or indeterminate attitude by being similar to one or another; the way in which the indeterminate one is indeterminately obscured (48a) or indeterminately unobscured; the way in which each blemish of a stained objective reference is removed by its antidote; the method of rejecting what relates to the worldly path; the particularities of the method of rejecting what belongs to the transworldly path; the particularity of rejecting emotions in insight and in contemplation; the particularity of rejecting emotional afflictions and intellectual afflictions, and so on. But since it is impossible to explain everything here, one should study the pure expositions of the Buddha, which have been explained in the works of the great charioteers who have been predicted by the Buddha, and, particularly, the works of Asanga and Nagarjuna from which I have quoted lavishly, as well as the le,S-bshad of Tsong-kha-pa, the second Buddha, who has explained them in detail.

A few verses:
It is certain that emotions are enemies who
Torture us by hundreds of unbearable pains and agonies,
Having strongly fettered us by a thousand chains of actions
In the prison of the world since beginningless time.

And they are also the intolerable thieves who
Whip us so that we do not rest a single moment and who
Steal the slightest happiness and prosperity in
Solitudes and monasteries that are too close to the tempting
jungle of the world.
Who is more stupid than a man (48b) who takes this Enemy since beginningless time into his heart as his dear Friend and who holds as his enemy the sentient beings in The six worlds who have been one's helpful parents.

Better it is for intelligent and thoughtful persons To take into their hearts the Wish-fulfilling Gem that Cherishes and esteems one's helpful parents and Tears out from their hearts the enemy of the emotions.
If one thus knows the structure of the mind and mental events, it becomes important to use this understanding as a means to train oneself. Otherwise, it is of little use, for it only starts arguments with others, makes one talk too much in order to will over someone to one's own side, and makes one strive to pile up synonyms. It is just as the ting-nge-'dzin rgyal-po (Samadhirajasfitra) states,

I have explained the teaching good in every respect, but If you, from studying it, do not put it into practice, It, like a great medicine for disease held only in one’s hand, Will not be able to nourish one back to health.

And the lhag-bsan’h.skul-ha (A(Ihyasayasamcodanasutra) says,

The bark of the sugarcane does not have anything. The flavor of sweetness is inside. By eating the bark, A person will never be able to get The sweet flavor of the sugarcane.

Words are like the bark. To think about The meaning is the sugar. Therefore,

Give up this delight in words and think About the meaning by being constantly attentive.

As stated above, when one has become wise in distinguishing what is positive and what is negative, and if
one applies oneself with diligence solely to experience the stages of the path, and if one fully understands the basic and proximate emotions as explained above, one can learn to recognize them at once when they arise, by scrutinizing them over and over again (49a) in one's existence, and can immediately overthrow them. As it is said in the spyod-jug (Bodhicaryavatara, V, 108),

The existential state of the body and mind
Must be examined over and over again.
This is indeed, in brief, the
Characteristic of preserving one’s awareness.

Arya Nagarjuna says (Suhrilekha, 17),

Know that the mind is just like a
Painting on water, sand, or stone.
Those who have emotions belong to the first,
The last and the best are those who desire the Dharma.

And from the mouth of dGon-pa-ba,l"

With regards to overcoming emotions, one must know their evil, their specific characteristic, their antidotes, and the reason for their origin. From knowing their evil, one must take faultfinding as an enemy, but if one does not know their evil, one will not realize them as an enemy who, as the nlo-sde'i rgyan (Mahayasutralamkara) and the spyod-jug (Bodhicaryavatara) state, is the driving force. If with regard to knowing the specific characteristic of the emotions, one does not heed the teaching of the Abhidharma, then, as the pbo-ng-po blga'i rubbyed (Pancaskan(lhaprakarana))(2 states,

Once one has understood the basic emotions and the proximate factors of instability as they are present in one's existence, the moment attachment or hate arises, he will come to grips with them, as he will be fully aware of what has come lip.
Therefore, the moment an emotion arises in its, we must take hold of it by thinking, ‘this is it’. Then by investigating the causes and conditions that produced it and the objective reference to which it is related, and by knowing the emotions as evil enemies spying on one’s weakness, we must turn it back by its antidote. (49b) The spiritual friend, Phu-chung-ba says,

**Even if I be conquered by the emotions I shall escape from under the floor.**

As the all-knowing (Tsong-kha-pa) says,

Emotion is different from any ordinary enemy who, even if he has been vanquished, will come out fighting again after he has regained his strength. Emotion, once it is removed from one’s own being, having no place else to go, will not return again. But since we do not strive to remove it, it returns again.

As we do not know which emotion is the basis of this sanisaric existence, and even if we know, since our counteragent of assiduous striving is weak, the emotions recover. But if the counteragents were strengthened, we certainly would be able to overcome them. Just as the all-knowing (Tsong-kha-pa) says,

When the emotions make their appearance, they should be attentively guarded with inspection from thinking about the evil they can do and the benefits one would gain in being separated from them. Every time an emotion raises its head, throw spears at it over and over again. As soon as any one of the emotions appear in one's life-stream, think of it as an enemy and fight it. Grapple with it so that it will not have a chance to appear. If done improperly, there will be no cure, and there will be nothing you can do about it.

The spyod-’jug (Bodhicaryavatara, IV, 45-46) states,
An ordinary enemy, even if he is banished from a country
Will remain in some other country and, when he has recovered,
Will return from there increased in strength.
But the way of emotion is different. (50a)

Each emotion is destroyed by the eye of discriminating awareness.
Once removed from one's mind, where could it go?
Where would it rest to gain strength to harm one?
If I do not strive assiduously due to my weak constitution,
it will be the end of me.

In brief, the spiritual friend, dCon-pa-ba, says,

What else is there but to watch over one's mind (lay and night?

And it is said,

When Ye-bar asked sNu'u-zer, "What are all your spiritual friends to make the foundation of their counsel tomorrow?" he replied, "Either the confrontation with direct awareness or tutelar Gods. Since the cause and result of action increases progressively, how is one to continue one's vigilance over one's commitments? Even if one has meditative attainments, one must see to it that emotions, like the loss of intrinsic awareness become fewer and fewer and less and less in strength."

In the same manner, at the appropriate times and in between, to search one's mind and apply antidotes to any emotion that comes, is the most important, and the very essence of all endeavor, for gaining what is positive in life. Accordingly, the reliance on spiritual friends must begin from healthy positive factors such as confidence-trust, and at any moment of one's endeavor, one must see how these are to be set up properly. One must by all means make constant effort to apply inspection and knowledge in order to set up what has not yet been set up and to let that which has been set up grow ever more.
May we be protected at all times by the Buddha, the fabulous tree, the only one who brings life to the world and its Gods,

Who completely removes worldly afflictions with drops of camphor, the three spiritual pursuits, which come from Buddha’s auspicious marks, which grow like flowers On the wide branches of our practice of the six perfections, whose shade grants great joy which is beneficial to sentient beings, and

Which blossom ever more radiantly from the trunk of the jewelled mind growing from the pure soil of renunciation. (50b)

The great Bodhisattvas, brilliant and complete, who are Renowned as the two great ones (Asaṅga and Nāgārjuna) among the six ornaments of India, Took many Wish-fulfilling Gems and the three spiritual pursuits From the store of jewels, the Buddha’s teaching—which is

Difficult to understand by those inferior beings Who are afraid of the deep and wide teaching, and difficult to measure.

These Bodhisattvas created waves in the shape of the various suggestive and direct meanings And flooded the glorious country of India with them.

By the compassion of all the Buddhas of all the worlds The Lord named Matibhadra (Tsong-kha-pa) Made clear, like the sun, the whole teaching of the Great charioteers in this northern country.

Those who do wrong actions become the helpers of Asaṅga (Cupid), And become degenerate by the clouds of stupidity Which are the waves of this degenerate age, and thus They become inflated by seeing this degeneration as the best possible world.
Because I lack fortune, I am born at the end of time,  
And, my training being small, my mental eye does not shine at all.  
Therefore, whatever I have not said here or have said wrongly,  
I confess to the wise.

My mental eye has been spoiled by the poison of impatience,  
My heart is torn by the demons of the eight worldly concerns,⁶³  
I am not only made contemptible, but even wrathful by them,  
And there is nothing I can do about it. (51a)

"a The eight worldly concerns [rhos brgyad] are: gain and loss, fame and disgrace, praise and blame, pleasure and pain.

May I and all beings, through this positive (pursuit),  
Be accepted by the true friends of the sublime spiritual pursuit  
And become one who can hold all the teaching  
In its width and depth.

May I become like Mañjuśrī in setting free  
All beings without exception and gain the courage  
Of not giving up kindness to others in difficult Situations which must be examined deeply.

I, Ye-shes rgyal-mtshan, having been urged over and over again by such religious people as Blo-bzang-bzang-po, the ascetic who explained the Sutras and Tantras, took up the subject matter. Having heard a little of the Buddha's teaching from the venerable, all-knowing, Blo-hzang-yeshes-dpal-hzang-po, and having received proper instructions in the hn/ang-chub lain gi/i rim-pa from the venerable great spiritual master Blo-bzang- rnam-rgyal and the Lord over all the teaching who goes by the name
Maitreyanatha, I composed this work, called 'The Necklace of Clear Understanding: An Elucidation of the Working of Mind and Mental Events' (Sams clang sc►ns-hyung gi tshul gsal Stoll-pa blo-gull mgnl-rgyan), by making the Abhi- dharmasamuccaya and its commentary the basis and embellishing it with statements from Tsong-kha-pa and his disciples in the solitude of brka-skis-bsam-gtan-gling temple on the border of Nepal and Tibet.

Figure 1: Growth-inhibiting and Growth-aiding Forces

Spiritual integration is the indispensable precondition for man to realize his inherent nature. This chart of the 'Growth-inhibiting and Growth-aiding Forces' which operate in the area of spiritual integration is based on Mipham's gSang-grel. See Introduction, p. xxiii.

![Diagram of Five Obstacles and Eight Counteragents]

Figure 2: Six Powers, Nine Phases, and Four Mental Controls

Equanimitiy means to make the mind fulls' concentrated on its objective reference. Such contemplation generates nine phases in it process assuring stability of mind. "One who strives assiduously will experience the natural state of impermanence directly. By concentrating intensely on what is present before the mind, he attains the unconditioned.'
This chart, based on AIi-pham's gSang- relates the nine phases to six mental powers and foie- mental controls. See also p. 36, n. 43.

Figure 3: The Basic Emotions and the Proximate Factors of Instability

This chart presents a list of basic emotions which give rise to the proximate factors of instability. Here Ye-shes rgyal-mtshan's Semsdang sums-Mjung is compared with Mi-pham's mkhos-'jug. The three poisons-erring-bewilderment, aversion-hatred and cupidity-attachment-give rise to the lack of intrinsic awareness [ma-rig-pa]. According to Ye-shes rgyal-mtshan, man is a complex
phenomenon and there is never only one cause for any situation in which he may find himself. For a complete list of the six basic emotions, see p. 64; for the twenty proximate factors of instability, p. 82.

H. ERBERT V. GUERT is Head of the Department of Far Eastern Studies at the University of Saskatchewan. Through his numerous translations and articles he has made major contributions to the understanding and accessibility of Tibetan Buddhism in the West. His books include The Jewel Ornament of Liberation, The Life and Teachings of Naropa, Treasures on the Tibetan Middle Way, Buddhist Philosophy in Theory and Practice, and Tantric View of Life.

Ri.-v. LESLIE S. KAWADURA is a Buddhist priest of the Pure Land School. He received a Master's degree from Kyoto University and is a teaching fellow at the University of Saskatchewan. He has also translated Golden Zeplur.

A biography of the author has recently been published as Volume I I of the Gcdun Sungrul.1linyin Gilmnplu•I Series under the title. by Main-dpal Biography of Tslum-clwng_gling l l rga1-intshun. rgyamtsho (1758-1H0I). the Eighth Dalai Lama.

Sears drm;; sears-hr; gi tshul numr-pa hshud-pu'i sdnm t'lri;;, rin-pr- elre-i ph rcll -1m.

Sears dung wills-byrrrg gi tshnl gull-pal. stun-pa No gsul ur~rrl-r"t/an.
For an account of these mental events in relation to the path and stages, one should look into other texts such as the Pai (askrnuIu-hu~sy/a by Prthivihandhu (P. ed. 11;3, No. 5560).

"On this gradation which involves a general understanding [go], a feeling-experience [rnyong], and a realizing understanding [rtogs], see 'Jigmed filing-pa's sGom-phyogs dri-lan in the ;Vgag-yur .'s'yingsmai Sungrab Scrics, Vol. 37, p. 97.

I,cnil inga rim bored tshul clangs leu'i yon-tun thou 'tshul In brag to !shad pa, in Ngag-yur tivingmai Smigrab Series, Vol. 41, pp. 238-244.

The five 'higher' kinds of awareness [ngon-shes Inga] are those possessed by ordinary beings. The five are: miraculous power; hearing human and olivine voices near and far; knowing others' thoughts: the recollection of former lives; and the vision of beings passing away and then reincarnating.

A similar idea is found in 'Jigs-med gling-pa's rA'am-mkhyen-shins;-rta, an autoconimientary on his Ton-tun-rin-po-~ he's-rnd~od (p. 792), where he quotes the t'ttaratantra, II, 3, in support of this.

"'The three spiritual pursuits are the Sravakavana, Pratevkahuddhavana, and Bodhisattvavana. For a detailed explanation, see H. V. Guenther, Buddhist Philosophy in ilicort/ and Practice.
11 rCval-tshah I’harnia Rin-then was a close disciple of Tsong-kha-pa and his immediate successor.

12 See the collected works of deal-sprul O-rgyan Jigs-rued chos kvi dbang-po in the Agu Gyur A-yingynatl Sungruh, Vol. 41, pp. 121-22. The hhidlurrnrusunurrruyu does not give the list exactly as quoted here. le-shes rgx'al-mtshan simply summarizes it into the five.

The Tibetan term zag-boas (what is bound to break) is a difficult term and refers to anything that breaks down the moment we try to build on it. For example, only too often we assume that something could not happen to us, but it does and takes its unaware; then our whole world collapses.

See also mkliw.'rijug, fol. lob-] la.

15 Alu yariiuunw [kun-gzhi ream-par shes-pal is a pervasive medium capable of retaining traces of experiences and their structures which may become actual experiences under suitable conditions. It is certainly not a mind. To associate it with perceptual processes collectively called 'consciousness' or 'mind' (rijiruna), as is done in the Indian Yogacara system, is it continuation of concretistic thinking. In rNving-ma-pa thought, the alayo iiinano is clearly distinct from the ulaya and the former is seen as a move towards a subjects mind. Kti.tamanorjiuiuna indicates the emotionally toned reaction that goes with our categorical or conceptual perceptions. For example, we perceive visually a green patch and conceptually a tree to which we react positively, negatively, or indifferently.

16 The six pnaniW s are liberality, ethics, patience, strenuousness, meditative concentration, and appreciative discrimination. See H. V. Guenther, Thu Jewel Ornament of Liberation, p. 148 if.

1' mkhas-'jug, fol 5b-6a.
is sews-pa, directionality of mind, agitates the mind and lets it get involved with the object. Dealing with it from the basis from which it operates, it is the whole complex. When we see something, as in visual perception, our mind goes in the direction of the object.

Sensory activity cannot change, thus, it is the basis from which we have feeling-tones.

'0 Holding the mind on what it has so selected, ie. its objective reference. It is fixation, ideation, and mental adhesion. See wkl a -jug, fol. 61a,b.

21 See H. V. Guenther, Tiw Jewel Ornament of Liberation, p. 80.

22 The three poisons are cupidity-attachment (raga), aversion-hatred (dresa), and hewilderment-erring (moha).

23 See nikluus- jug, fol. 5a.

2'The author obviously tries to give an analysis of a perceptual situation indicated by the phrase "I see a woman." This is to say that there is an objective constituent which displays certain qualities about which we believe that "This is a woman." This belief of course does not guarantee that there is an ontological object of the physical object corresponding to the epistemological object of the perceptual situation.

25 See mkkas- fol. 5a.

26 See mkkas itio, fol. 5a and 28a,h.

'-' See mkha.s- jug, fol. 51).wms-pa refers to the total psychic energy. It is it motivating force.

,, ntkhas-'jug, fol. ha.

IN nikhas- fol. 6a.

32 See Mi-pham's dhus Bang nitha' rnani par 'hited pa'i
Attention is always a fluctuating process, but its fluctuations can remain strictly within the perception. That is, we may concentrate on one aspect of it and then on another; in each case we will not use attention for meta-perceptual ends, but will find ever new potentialities.

For a full explanation, see :lhridhuruwarnuru/a, pp. 78-79.

For the four methods of critical investigation, refer to p. 37.

I leave armor refers to the armor of strenuousness. The armor [go-cha] has been explained in the Collected Works of 'sGaon-po-pa (Nga 5a and Dza 2a) as follows: One must pursue the paths wearing two armors, the external which is the armor of seeing, and the internal which is the armor of discriminative awareness. Also, Klong-chen-pa, in his Zab mo tlan('s Xijing thit, Ta-bzhi, Vol. 11, p. 7) speaks of four armors. In putting on the armor of trust, one will endure hardship. In putting on the armor of learning, one will destroy external and internal postulates. In putting on the armor of assiduous striving, one will experience realization. And by putting on the armor of humility, one will not cling to fame.

12 worldly and transworldly excellences: the former is related to the physical world, the latter to the way in which
a Buddha, an Enlightened One, would see the world.

"For the nine phases in the process assuring stability of mind [sems gnas dgu] see Mahayanusutralatykara, XIV, 11-14 (P. ed. 108, p. 85, 1.5-2.2):

Because the mind is made to stay with its objective reference, it cannot wander about to this or that. Because the mind quickly experiences any distractions, it returns to its objective reference once more. [11]

The wise one gradually draws
His mind inward, and then,
Because he sees the virtue of this,
He tames his mind through deep contemplation. [12]

He sees distractions as offensive
And subdues unpleasant things on account of that.
When greediness, unhappiness, etc., arise,
He subdues them in the same manner. [13]

Thus, the one who strives assiduously
Will experience the natural state of impermanence directly.
By concentrating intensely on what is present before the mind,
He attains the unconditioned. [14]

These four verses explain the nine phases in the process assuring stability of mind. The nine are:

1. The mind is made to settle on its objective reference ['jug-par byed].

2. It is made to stay with it totally [kun-tu-'jog-par byed].

3. It is made to stay with certainty [nges-par 'jog-par byed].

4. It is made to stay with intensity [nye-bar 'jog-par byed].

5. It is tamed ['dul-bar byed].
6. It is subdued [zhi-bar byed].

7. It is intensely subdued [nye-bar zhi-bar hued].

8. It is made to flow in an integrated manner [rgyud gcig-tu byed].

9. It is made to stay with equanimity [mnyam-par 'jog-par byed].

This statement in the ?1luhiyanasutralumkaru becomes more lucid when we understand it according to Mi-pham's gSang 'grel plalogs-hru'i mom-s•el gyi spyi-don 'od-gsols.so ying-po fol. 59a-6 II) where he relates the nine phases to the six powers [stops-drug[ and the four mental controls [yid-lived bzhi] [See Appendix, Figure 2, p. 119]. Ali-pham continues by saving, 'These nine phases are completed through five stages. The first one is like a waterfall over a steep mountain. The second one settles like the water in a pool at the foot of the fall. The third one flows like a river. The fourth one is calm like the depth of the ocean. The fifth one stands firm like a mountain.

" Absolute is ideal, the ideal is ultimate positive. This is not a concrete positive judacd as positive.

r' The ten powers of the Buddha are the ten kinds of knowledge possessed by it Buddha. The ten are:

1. The power to know correctly what is real and what is not real

2. The power to know the relationship between action and its retribution

3. The power to know correctly the depth and progression of contemplative meditation

4. The power to know correctly the depth of man's mental capacity and his potentiality

5. The power to know correctly the limit of mans
intellectual capacity

6. The power to know correctly man's ability, his personality, and his action

7. The power to know correctly which actions land one in which existence

8. The power to recall past events correctly

9. The power to know through divine eyes the time of one's death and the good and evil existences in the future

10. The power to know that when one's emotions are overcome, a future existence will not take place, and to know that others will overcome their emotions

17 See mkhas- fol. tih; as to their origination, see fol. 49a.

's The three levels of existence are the world of desire, the world of form, and the world of no forms.

" The implication here is the idea, "The master no doubt is great: I could never reach his height, but look how important I am that I have such a great master!"

52 it,, (path) is the development of one's potentiality and therefore is not a link joining two points.

'4 The meaning of this passage is that there is no ontological principle or essence which by definition is that by which something is what it is. The assumption of an essence contradicts the axiom of transitoriness.

Siva refers to one of the Hinduistic Gods who has been stated here as an example of a creator God. In the Sat khva system, prakrti is the creative matter which is believed to be the source of both physical and mental events that make up the world.
'3' See also, Mi-pham's commentary to the Snhrllekha, fol. 52.

See mk{ma.s-jug, fol. 61).

57 The ka.s►/apaparirarta lists the following four bleak things [nagchosbzhi]:

1. To lie to one's teacher, guru, or monk
2. To produce regret in the minds of others who have no regret
3. To speak words which neither praise nor glorify nor explicate those who truly seek the \lahavana path
4. To praise others with dishonesty and deceit and without a pure feeling

'Four levels of meditation [bsamgtanzhij: See 11. V. Guenther, Philosophy and Psychology in the Ahhidhormo, pp. 216-218; The Jewel Ornament of liberation, p. 89, n. 37. Mi-pham in his hShrs.shyinggimchon 'grel padnmpdkarpoi phreng-ha (fol. 23) states:

The counsel that you must devote yourself to the four levels of meditation means to put into practice intense concentration which will lead you to the excellent state of calm. The first level is threefold in view of it being it counteragent, a benefit, and it state. Counteragent: Integrated actions which are in accordance with observation and discursiveness reproves emotional instabilities such as the desire to torment and the desire to strive after sensuous objects. Benefit: One enjoys the joy and satisfaction which arise from one's solitude. State: The concentrated and integrated state of mind. The second level: The mind having been freed of observation and discursiveness experiences only joy and satisfaction. The third level: The mind having been freed of joy which is an indifference to composite things and introspective understanding experiences
only satisfaction. The fourth level: The mind having been freed of even the satisfaction of purity and equanimity, has only it feeling tone of equanimity and is integrated concentration. In gaining these four levels of meditation, all frustrations and unhappy states of the mind are overcome.
